1862.

JAMES CARTER

SEED MERCHANTS AND NURSEMEN

237 & 238, HIGH HOLBORN, LONDON, W.C.

CARTER'S FERTILIZER, PRACTICAL GARDENER, &c.

CARTER'S FERTILIZER.

Registered Trade Mark.

Professor CHURCH, of the Royal Agricultural College, Cirencester, says, "I am much pleased with the thoroughly satisfactory character of Carter's Fertilizer."

Carter's Fertilizer is a manure specially prepared for the use of gardeners and amateurs, and its speciality over other manures is its nutritious and stimulating powers; in super-inducing a quick, healthy, and vigorous growth, it is therefore specially recommended to be used in all forcing operations: it will also be found the best and cheapest Manure for the Flower Garden, Kitchen Garden, pot plants, Fruiting plants in pots, including Vines, Strawberries, Orchard House Trees, Cucumbers, &c., Fruit Trees, Vine Borders, and Strawberry Beds, and is highly beneficial if applied as a Liquid Manure for Lawns. *Directions for Use will accompany each Tin.*

Report and Analysis of Carter's Fertilizer, by Professor CHURCH, M.A., F.C.S., Professor of Chemistry, Royal Agricultural College, Cirencester.

I have submitted to careful analysis the sample of Carter's Fertilizer forwarded to me a few days since. The Fertilizer satisfies all the conditions of an excellent Horticultural Manure. Its physical condition is first-rate, it is free from excessive moisture; it contains in large amount those ingredients of plant food which it is necessary to supply in a manure, and it contains these ingredients in effective combination and in due proportion.

The phosphates in the Fertilizer occur in their most available conditions, and constitute more than four-tenths of the weight of the Manure; while the nitrogenous matters are equivalent to nearly six per cent of ammonia, an amount of this stimulating and valuable ingredient which it would probably not be safe to exceed.

I ought to add that the inert matters in Carter's Fertilizer are reduced to a minimum.

THE ANALYSIS.

Molsturo	14.60	Alkaline Salts	11.15
*Organic matter and Water of Combination ...	26.27	Carbonates of Lime and Magnesia	0.43
Phosphates	43.80	Silica	3.65
			100.00

* Containing 4.77 per cent. of Nitrogen, equal to 5.79 per cent. of Ammonia.

Sold in Tins, containing 2 lbs. for 1s. 9d.; 7 lbs. for 4s. 6d.; and in bags of Quarter Cwt. for 15s.; Half Cwt. for 25s.

NOW READY,

CARTER'S PRACTICAL GARDENER.

132 pages Crown. Third Edition, Illustrated in Colours. Price 1s. (post free, 14 stamps.)

A complete guide for the every-day management of the Kitchen Garden, Fruit Garden, Flower Garden, Conservatory, Stove, Greenhouse, Peach House, &c., &c., beside other original articles of a practical nature, useful alike to the Amateur as well as the professional Gardener.

The rapid sale of the two editions of "Carter's Practical Gardener" (10,000 having been sold within a few months) has induced us to prepare a third edition. The matter has been carefully revised and re-arranged, and several important additions made, so that we have every confidence that the third edition will command a rapid sale. The two editions were favourably spoken of by the following leading papers:—The "GARDENERS' CHRONICLE AND AGRICULTURAL GAZETTE," "COUNTRY LIFE," "LAND AND WATER," "FUN," "THE FIELD," The "JOURNAL OF HORTICULTURE," and The "ILLUSTRATED TIMES."

NOW READY,

NEW AND IMPORTANT WORK ON GARDENING,

With upwards of 400 Illustrations, executed in the best manner.

THE PARKS, PROMENADES, AND GARDENS OF PARIS.

By W. ROBINSON, F.L.S.,

Correspondent of the *Times* for the Horticultural Department of the great Paris Exhibition.

This work, which has just appeared, fully describes the Public and Imperial Gardens, Squares, Avenues, and Boulevards of Paris and its environs, including Versailles, while an abundance of beautiful views and figures place the various scenes treated of accurately before the reader's eye. Several hundred pages of the book are devoted to public gardening, considering the subject with reference to the wants of our over-crowded cities, but the greater portion is occupied with a thorough and profusely illustrated account of every interesting and instructive feature of the practical gardening of Paris. Of the wonderful underground mushroom caves, where miles of beds may be seen in bearing at one time, there are eight views, including a plan, the first ever published on this most curious and interesting subject, while scores of exact and beautifully drawn figures show to the life all the more important plants for the decoration of apartments, sub-tropical gardening, &c. The practical gardener or amateur may get from the book a better knowledge of the subjects discussed than he could by visiting the spot, and no equally well illustrated book on gardening has hitherto been published at anything like the price.

Price 18s.; or by post, 19s.

The book can be conveniently despatched to our customers with their plant and seed orders, and also by post.

Believing it of importance that all practical gardeners should be acquainted with this book, we propose to supply all head gardeners, journey-men, and bona fide gardeners of any kind with it at trade price, 14s., or by post, 15s. We wish it to be particularly understood that gardeners only can be supplied at the reduced price.

For Collections of Bulbs, see pages 3, 4, and 5. For Collections of Plants, see pages 32 and 33.

LETTERS RECEIVED.

All Letters received are opened by one of the Principals, and when necessary replied to by return of post; to facilitate carrying out this Rule we would respectfully ask that the name and address of the correspondent be written in full.

EXECUTION OF ORDERS.

We make it a rule to despatch Bulb orders one day after they have been received, and Plant orders two days after receipt. In the height of the season it is a matter of extreme exertion to carry out this rule, and we would suggest to our customers that when their esteemed orders are written separate and apart from the letters, they are assisting us very much in the despatch of business. Early orders are respectfully solicited.

CHANGE OF RESIDENCE.

We respectfully invite our customers to notify to us any change of Permanent Address, in order that we may be able to forward our Catalogues with regularity.

ATTENTION TO CUSTOMERS.

It is our earnest desire that all the requirements and directions of our customers be scrupulously attended to by our assistants, and we practice the utmost personal supervision to see that it is carried out; we would, therefore, respectfully request that we be informed if at any time there is cause of dissatisfaction, that we may have it rectified at the earliest possible moment.

RECOMMENDATION.

We respectfully solicit the favour of your kind recommendation of our House to those of your Friends requiring seeds for the Garden or Farm, or Plants and Flower Roots for the Garden or Conservatory. We shall be most pleased at all times to forward our Catalogues to any address when requested to do so.

DESPATCH OF ORDERS.

Full instructions as to the proper mode of forwarding should accompany each order, as it is calculated to expedite transit of goods and save vexatious mistakes. All goods are advised the same day they are forwarded, and the invoice is posted the day after.

TERMS OF PAYMENT.

Our terms of credit are three months from the receipt of goods (unless special arrangements are made otherwise), and our books are made up quarterly, *i. e.*, 1st December, 1st March, 1st June, and 1st September. As it is a great saving in the expense of book-keeping if goods are paid for when received, we allow a discount of 5 per cent. (1s. in the pound) for all payments amounting to 20s. and over, made within fourteen days from the date of invoice.

REMITTING MONEY.

The readiest mode of transmitting money is either by Post-office Order (payable to James Carter and Co., at the "Chief" Office) or by Cheque (crossed London and Westminster Bank). Small accounts under 5s. may be paid in postage stamps. We would respectfully ask that our invoice or statement be returned with each remittance, in order that it may be properly receipted. No Post-office Order should be sent without a name, as the Post-office authorities forbid their officers from informing the payee of the name of the remitter. We earnestly request that no money in coin be sent through the post, as besides risking the loss of the money, it offers temptations to the Post-office servants.

TO UNKNOWN CORRESPONDENTS.

It is particularly requested that New Correspondents will be good enough (if not remitting Cash with Order) to give a reference to Banker, or some one already known to our House, thus avoiding delay.

RETURNED HAMPERS, BOXES, &c.,

Are taken back at half the price charged for them, if returned, free of charge, and in good condition, within one month; in returning them it is absolutely necessary to advise us by post, stating by what route they are forwarded.

QUALITY OF BULBS.

Our Dutch Flower Roots are imported from six of the most extensive growers in Holland; and as we are perhaps the largest importers of Dutch Roots in the United Kingdom, we are in a position, from our knowledge of the best growers, and the extent of our purchases, to command picked roots, so that our customers have the advantage of selecting "picked roots," at extremely reasonable prices, from the largest stock in England.

BULBS AND PLANTS FOR EXPORTATION.

We have been very successful in exporting both Plants and Bulbs to the East Indies, the Colonies, &c., &c. We cannot too strongly impress on our foreign correspondents the necessity of sending their orders early in the season (say not later than August), as, from the perishable nature of Bulbs and Plants, it is absolutely necessary for successful exportation that we should be in a position to forward them when they are in their actual dormant condition. A remittance should accompany orders from unknown correspondents.

TO INTENDING PURCHASERS.

To those of the public who have not already dealt with us, the following extracts, taken from letters of approval (many hundreds of which have been received during the past year), may, perhaps, be found useful in confirming to them the high character enjoyed by our House for the last thirty years.

F. SELBY, Esq., *Ravensbourne Park.*

"The Hyacinths you sent are very satisfactory."

J. J. JENKINS, Esq., *Bath Villa.*

"I was much pleased with the bulbs; they all turned out well."

Mrs. PHILLIPS, *St. Peter's Parsonage.*

"The Hyacinths have bloomed beautifully."

J. GREENFIELD, Esq., *Petworth.*

"The Hyacinths I had from you are very good indeed. I am much pleased with them."

MESSRS. DUNCAN & SON, *New Zealand.*

"The box of bulbs came to hand by the November Mail in fine condition, the Hyacinths especially are excellent. Previous attempts to introduce bulbs from England have, in nearly every instance, been comparative failures, and we must congratulate you on the success which has attended this trial."

Lieutenant F. BAINES, *Secunderabad.*

"I received the box of bulbs in very good condition. The roots from the moss packing are in very good order, and have taken root at once."

R. SCLATER, Esq., *Hoddington.*

"The Hyacinths you supplied last autumn were very good indeed, the best I have ever seen."

J. SILLAR, Esq., *Sydenham.*

"I was so pleased with the bulbs I had from you last year that I will thank you to send me another supply."

Mrs. RYDER, *Richmond.*

"The Roses arrived quite safely, and I am very much pleased with them."

J. H. WRIGHT, Esq., *Chatteris.*

"Your last year's bulbs were so supremely beautiful that I long for some more this year."

Mr. YATES, *Rugby.*

"The bulbs last sent were remarkably fine."

Mrs. SHEPHERD, *Burton.*

"The bulbs had from you last year answered beautifully, and were much admired."

W. A. DANIEL, Esq., *Ramsgate.*

"The box of bulbs of last year turned out capitally."

Mrs. PRICE, *Dunston.*

"I am much pleased with the plants, and beg to enclose the amount of account."

Mrs. MARSHALL, *Bedford.*

"Begs to inform Messrs. Carter that the Hyacinths sent with the Fruit Trees last October are the finest she ever saw."

Mr. T. MOSS, *Loughton.*

"The goods arrived safely, and I find them in good condition and fine quality."

E. B. BROWN, Esq., *Lahore.*

"I am happy to say the bulbs have arrived in good order, and I am much obliged for them."

E. S. WHITE, Esq., *Fowey.*

"The bulbs had last year were much admired."

A. PIPER, Esq., *Cockley.*

"I beg to thank you for the very nice collection of bulbs you have forwarded to my order."

Mrs. ROGERS, *Abercarn Fach.*

"The bulbs last had from Messrs. Carter & Co. were so good that Mrs. R. will be glad to have another supply from them."

The Rev. T. S. CARLTON, *Glenfield Rectory.*

"I was perfectly satisfied with the collection of bulbs I had from you last year."

L. CURRIE, Esq., *Manor House.*

"The bulbs sent last season were the best in the neighbourhood."

JOHN WALTERS, Esq., *Borden.*

"I hope all will be as good as the former orders, which have turned out excellent."

Mrs. POTTS, *Glover's Lodge.*

"Everything came beautifully packed and very satisfactory."

E. GUTTERIDGE, Esq., *Maldon.*

"I am extremely pleased with the collection of bulbs you sent me last autumn, and also the Roses."

For the convenience of those of our customers who do not wish the trouble of selecting for themselves, we offer the undermentioned Collections of Bulbs, which contain respectively all the sorts required for the purpose mentioned; and, the choice of varieties being left to ourselves, we in every case send the most showy and popular sort. We offer the entire collection at a much lower rate than if the sorts had been chosen at the option of the purchaser, because of the saving effected in our purchases, and also in making up a number of collections at one time. Nos. 1, 2, 3, and 4 are well adapted for forcing.

No. 1. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND WINDOW DECORATION, INCLUDING BASKET AND PACKINGprice 84 0

Contains—

Hyacinths, 50 in 25 extra fine sorts
 Polyanthus Narcissus, 36 in 12 named varieties
 Jonquils, sweet-scented, 50
 Crocus, finest named, 200
 Tulips, extra fine named double, 50
 Do. do. single, 50

Cyclamen persicum, 4
 Dielytra spectabilis, 4
 Lilium speciosum, in variety, 4
 Scilla siberica, 36
 Snowdrops, extra large selected, 100.

No. 2. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND WINDOW DECORATION, INCLUDING BASKET AND PACKINGprice 63 0

Contains—

Hyacinths, 36 in 18 extra fine named sorts
 Polyanthus Narcissus, 24 in 12 named varieties
 Jonquils, sweet-scented, 36
 Tulips, extra fine named double, 36
 Do. do. single, 36
 Crocus, finest named, 150

Cyclamen persicum, 3
 Dielytra spectabilis, 3
 Lilium speciosum, in variety, 3
 Scilla siberica, 24
 Snowdrops, extra large selected, 100.

No. 3. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND WINDOW DECORATION, INCLUDING BOX AND PACKING.....price 42 0

Contains—

Hyacinths, 24 in 12 extra fine named sorts
 Polyanthus Narcissus, 18 in 9 named varieties
 Jonquils, sweet-scented, 24
 Tulips, extra fine named double, 25
 Do. do. single, 25
 Crocus, finest named, 100

Cyclamen persicum, 2
 Dielytra spectabilis, 2
 Lilium speciosum, 2
 Scilla siberica, 18
 Snowdrops, extra large selected, 75.

No. 4. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND WINDOW DECORATION, INCLUDING BOX AND PACKING.....price 21 0

Contains—

Hyacinths, 12 in 12 extra fine named sorts
 Polyanthus Narcissus, 9 in 9 varieties
 Jonquils, sweet-scented, 12
 Tulips, extra fine named double, 12
 Do. do. single, 12
 Crocus, finest named, 50

Cyclamen persicum, 1
 Dielytra spectabilis, 1
 Lilium speciosum, 1
 Scilla siberica, 9
 Snowdrops, extra large selected, 36.

No. 5. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND OUT-DOOR PLANTING, INCLUDING BASKET AND PACKING.....price 84 0

Contains—

Hyacinths, 36 in 18 extra fine named sorts for pots or glasses
 Do. 36 in 3 colours for bedding
 Narcissus, Double, white, 50
 Do. Poetique or Pheasant-eye, 50
 Double Daffodils, 50
 Tulips, very fine named, 50
 Do. extra fine mixed double, 50
 Do. do. single, 50
 Crocus, blue, 200

Crocus, striped, 200
 Do. large yellow, 200
 Do. white, 200
 Anemones, extra fine mixed, 100
 Gladiolus Brecheleyensis, 24
 Iris, extra choice mixed English, 50
 Do. extra fine mixed Spanish, 50
 Jonquils, Campernel, 50
 Ranunculus, extra fine mixed, 100
 Snowdrops, 150.

No. 6. COMPLETE COLLECTION OF BULBS FOR CONSERVATORY AND OUT-DOOR s. d.
 PLANTING, INCLUDING BASKET AND PACKINGprice 63 0

Contains—

Hyacinths, 24 in 12 extra fine named sorts for pots or
glasses
 Do. 24 in 3 colours for bedding
 Narcissus, Double, white, 25
 Do. *Poeticus* or *Pheasant-eye*, 50
 Double Daffodils, 25

 Do. extra fine mixed Spanish, 12
 Jonquils, Campernel, 9
 Ranunculus, extra fine mixed, 18
 Snowdrops, 24.

THE HYACINTH (continued).

The Hyacinth is one of the best of all plants for the open garden in Spring; its effect, distant or otherwise, is of the most charming character, and we are not without hope of seeing it a conspicuous ornament of every garden at that season. The mixed and cheap self-coloured kinds will suit admirably for flower-garden planting, wherever it may be inexpedient to procure the more expensive kinds.

The Hyacinths usually supplied for bedding purposes having been occasionally complained of as being insufficient and uncertain of colour, we have devoted careful and particular attention to the removal of this source of complaint, and are happy to say that we are now in a position to supply Hyacinths of brilliant and certain colours, viz., light or dark blue, light or dark red, pure white, and white with coloured eyes, at 4s. 6d. per dozen; this we trust will be deemed a desirable consummation, as it will render possible, at a moderate cost, a beautiful and effective out-door arrangement of this richly scented and favourite flower. We can also supply the ordinary mixed varieties of Hyacinths (the distinct shades of colour of which we cannot guarantee) at 3s. per dozen, or 21s. per hundred. See pages 10 and 11.

For drawing-room, greenhouse, and conservatory decoration, almost everybody admires and employs the Hyacinth for its rich and delicate variety of colouring. It is the first plant that comes to aid the forcing gardener in Spring, and continues for weeks and weeks to perfume and beautify our homes. The time to begin potting is September for an early bloom, and if a good and continuous succession is required, in intervals of a fortnight till the end of the year. The best soil is a friable sandy loam, with a little leaf mould and rotten dung. Cultivators usually put a little sand under the bulb, which should show its apex a little above the level of the soil after being potted. Some now put cocoa fibre instead of sand; either will do, but we prefer the sand. Where pot Hyacinths are grown on a large scale, it would be advisable to have a number of pots made on purpose, as the ordinary-shaped flower pots are not deep enough for Hyacinths, which root deeply, and, to do well, require plenty of room. These pots should be made nearly upright, and of two sizes; one, for three bulbs in a pot, should be nine inches in diameter (inside measure) and nine inches deep; another, for one bulb in a pot, should be six inches in diameter, and seven inches deep. When to be finished off in pots, one bulb in each pot is best, for if all the bulbs in a larger pot do not succeed well, the effect is marred; the smaller the pots are, the more easily can a fine effect be produced by massing them in vases or baskets afterwards. When fully established, the plants lose little or nothing by being turned out of such pots, and placed as close together as desirable in suitable soil, or even in half-rotted moss. A common 48 pot will grow a plant nicely, though deeper ones, as mentioned above, would be better. When potting is complete, let the pots be placed on a dry level bottom of coal ashes in an open place, and covered over, to a depth of from six to eight inches above the bulbs, with decayed leaves, sand, or old tannor's bark, leaving it rather higher in the centre than at the sides, so as to throw off heavy rains; or a few boards or a tarpaulin will be useful for the same purpose, as the soil in the pots will absorb as much moisture from the ground as the bulbs require. If placed in such a bed from the beginning of September to the middle of October, the bulbs will have a temperature ranging from 50° to 55°, which, in soil not over wet, will promote a healthy vegetation. In from eight to ten weeks the pots will be getting crammed with roots, and before that time it is vain to attempt to force them to produce good flower stems. The bulbs had been gradually deprived of their moisture the previous summer; and now they must be gradually supplied with it through healthy roots to secure a healthy flower stem early in the season. When wanted in full bloom by Christmas and the New Year, those pots full of roots, and showing the flower truss through the incipient leaves, should be selected, placed at first in a shady part of a greenhouse, so that the blanched foliage may not be hurt, and in a few days remove to a forcing pit, where a mild bottom heat can be given to the plunged pots of from 70° to 75°, and a top heat of from 60° to 65°. Here the plants must be gently shaded, until the leaves become quite green. The pots, though plunged, should be set upon slates, boards, or anything that will prevent the roots from entering the plunging medium, whether tan, leaves, &c., &c. The extra bottom heat is a great means of success at this early period. Until moved from the bed, very little watering will be needed. The flower truss is apt to come too close, the stem not growing long enough, at this early period, to let the florets expand; an empty flower pot placed on the top of the other will lead to remedy this; we prefer, however, funnels of paper, say eight inches in length, placed over the pot. If, after this, the flower stem should still be too dumpy, give a few degrees more top heat for a few days. Whenever the stem shows the least sign of being too much drawn, so as to leave an excess of room between the individual flowers, gradually lower the temperature in which the plants are placed. When the flower stem and leaves are all that could be desired, and the flowers are approaching the opening, raise the pots out of the plunging medium, and even keep cooler by more air; now the bulbs will require a free supply of water. After the pots have stood on the surface of the bed for a few days, remove them to the greenhouse or sitting-room; manure waterings and a rich top-dressing will generally keep them in longer luxuriance. To have blooms in March and onwards, little of this extra care is necessary; the chief extra treatment required may be the paper funnel. When the pots are brought from the bed or the cellar, keep shaded until the leaves get green, and then place them on the greenhouse shelf or parlour window; in all cases, healthy rooting must precede fine blooming. In the case of those of our readers who have no means of covering up their pots in a bed, or even a collar in which to place them without covering, the bulbs may be grown in any sitting or dining-room in the same way, requiring only that a damp atmosphere should be kept about them; and light is not wanted until they are progressing freely. The bulbs, when potted, will do well in the bottom of a cupboard, if set in damp moss or anything of that kind, and a small portion of the same sprinkled over them. They dislike at first the dry air of a sitting-room; if the floor of the cupboard is sprinkled frequently, that will be sufficient. Great success depends generally on trifles, and to keep a damp atmosphere about the bulbs at first is far better than deluging the pots with water.

When in full free growth it is desirable to give Hyacinths thorough watering when they are being watered, for they are gross feeders, and, like all pot plants, suffer from the little-drop-of-water-at-a-time system.

All pot Hyacinths must be staked in some way, and with slender wire is the best and neatest way to do it. Conceal the top of the stake among the flowers on the spike, and never let it show above them when the spike is fully grown.

Culture in Glasses.

This very interesting mode of growing Hyacinths may be attended with a good result if sufficient care is taken. Some say they cannot be grown well in this way, but this is a mistake, inasmuch as we frequently see them bloom nicely in glasses with persons who possess but very little skill and experience with plants. It is true they may not be grown quite so well in this way as when placed in fertile earth, but they may be sufficiently so to justify in-door

gardeners in the extensive practice of this delightful little phase of room gardening. If good bulbs are procured, there should be little difficulty in growing Hyacinths in glasses. The single kinds only should be used, because they are hardier, earlier, and in every way preferable for glasses. The water should not be allowed to touch the bulb, though very close to it, and rain or soft water should be used. When placed in the glasses, the bulbs should be put in some cool place where light is excluded—say a cupboard—there to remain for five or six weeks, and when the roots are well developed, and the swelling bud and spike starting freely, they may be gradually inured to the full light. The water should not be changed, but filled up occasionally, and a small lump of charcoal kept at the bottom. From the time the flowers begin to show, the more light and air is given the better. Some place a very little guano in the water, but they may be well grown without any dilution of the kind. It would be invidious to select where all are beautiful; all the fine kinds in cultivation will be found described and priced in our lists.

SINGLE AND DOUBLE HYACINTHS BY NAME.

It is sometimes supposed by the inexperienced that the best Hyacinths are those which produce double flowers. We think it right to state that the contrary is very often the case, and it is a fact that there are many more varieties of single Hyacinths which produce a fine free truss of bloom than there are of double varieties.

A dagger (†) indicates the double varieties.

An asterisk (*) signifies that the bulb to which it is prefixed is proper for pots or the open borders.

Two asterisks (**) that it is suitable for pots, glasses, or baskets, and the open borders.

Those without an asterisk attached we cannot recommend as sorts producing large trusses of bloom, the greater part of them are, however, novel and distinct in colour. These should be grown in pots.

HYACINTHS FOR EXHIBITION.

FINEST SELECTED SORTS.

In cultivating Hyacinths for exhibition purposes it is desirable to grow them in pots (for particulars see page 7), and the strictest attention must be paid to the soil and temperature of the atmosphere: if the cultivation be attended with success, the results will amply repay for any amount of extra care that may have been bestowed upon them. The sorts specified below are the best that can be grown for the purpose, and we recommend them with the greatest confidence.

HYACINTHS IN DISTINCT COLOURS FOR BEDDING.

Hyacinths for bedding purposes being required distinct and certain in colour to admit of effective arrangement, we are happy to state that we are in a position to meet this requirement, and can supply good sound roots of the under-mentioned colours, from named varieties, at 4s. 6d. per dozen; and as we offer them at so moderate a charge, we trust that we shall receive more extensive orders for these richly-scented and favourite flowers, which, when well arranged, are the finest ornaments a Spring garden can produce. Full directions for culture will be found at page 7.

TULIPS (continued).

The best 24 Single Early Varieties in cultivation.

These varieties are particularly adapted for culture in pots, edgings, or beds; they have much larger blooms than the Duc Van Thol, but they are not quite so early; they may be planted three or more in a pot with Hyacinths or Polyanthus Narcissus, mingled with which they present a most pleasing and brilliant effect. The following may be considered the most desirable and distinct varieties:—

Duchesse orange.....	12	6	2	0
Fahiola, white ground, flaked with violet purple.....	..	10	6	
Globe de Rigaut, violet, white striped, large and fine.....	25	0	3	6
Joost van Vondol, rich bright rosy crim- son, slightly flaked with white, extra fine ..	7	6		
Keizer Kroon, bright crimson, broadly edged with yellow.....	21	0	3	0
6 of each of the above 24 sorts, for 42s. 6d.				
6 of each of 18 sorts (omitting the most expensive), 20s.				
Very fine, mixed, per 1000, 70s.; per 100, 7s. 6d.; per doz., 1s.				

Thomas Moore, yellowish buff, distinct and good.....	10	6	1	6
Van der Neer, dark violet, extra fine, the very best of the purple selfs	10	6	
Vermilion Brilliant, bright scarlet; magnificent.....	40	0	6	0
Waterloo, dark red.....	21	0	3	0
Yellow Prince, pure yellow; fragrant..	10	6	1	6
3 of each of the above 24 sorts for 22s. 6d.				
3 of each of 18 sorts (omitting the most expensive), 10s. 6d.				
Extra fine, mixed, per 1000, 100s.; per 100, 10s. 6d.; per doz., 1s. 6d.				

The best 18 Double Early Varieties in cultivation.

The Single Tulips have the advantage of the Double in elegance of form; but the Double are decidedly the most showy, and, when well developed, present an imposing appearance.

THE CROCUS.

We are not quite sure of the justice of putting this sturdy, hardy, useful, and beautifully-coloured flower second to the Tulip, and for our own part, we make a larger use of the Crocus than we do of the bedding Tulip, for the simple reason, that Crocuses of the most diverse and elegant colouring may be easily had, and may be varied and mixed in so many ways, that their presence is tolerable in numerous positions, where other Spring flowers may not be grown with advantage and with good taste.

we do not merely suggest that such mixtures would be beautiful as edgings, we have proved it, and venture them to form, when in full flower of a sunny Spring day, by far the most charming of all edgings; they should not be much used in large beds, except in this way. We have also mixed them plant for plant with the Snowdrop, and clump for clump; by planting them rather deep, say five or six inches, the ordinary preparations for any changes in the beds may be made without disturbing the Crocus, by not digging too near the edge, and thus they will flower away year after year, getting stronger and blooming better every season, unless indeed the soil is of an unusually stiff and wet character. The best show of Crocuses we have ever seen was afforded by edgings and clumps, in a free, rich, and light soil, in which they had not been disturbed for nearly twenty years; this is not what we recommend, of course, but it serves to show the thoroughly hardy and useful nature of this glory of the Spring garden. As regards cultivation, it would be difficult to find any plant, wild or cultivated, better able to take care of itself. As soon as the bulbs are obtained, they should be planted, and perhaps the readiest way is to open a drill with a hoe, or light spado, to the required depth, and then pop in the bulbs regularly; cover over, and all is done that is necessary for the best of Crocuses. If the cultivator wishes to increase a rare kind, the best way is to take the stock of it up every second year, and divide them, so as to give each little crown as much room as it could desire. In clumps along the mixed border they are also very effective. For in-door culture, they should be potted at intervals—first, as soon as the bulbs are ready, again early in October, and, if a long succession is required, later still; and as they are only effective in masses, a 4-inch pot should contain five large bulbs, or seven smaller ones, and so on with other sized pots in proportion. In forcing, the extra heat must be applied very gradually, and scarcely over above 55° to 60°; and before being submitted to any rise, the pots must not only be full of roots, but the flower buds appearing, and, as soon as tending to the opening, the pots must be removed to a cool greenhouse or window.

Among the many modes of growing them in rooms, a pretty method is to have sugarloaf-like pyramids, made of earthenware, tin, or zinc, painted to fancy, with rows of holes all round, each hole being about half an inch in diameter and separate about two inches from its neighbour, and the rows of holes three inches apart. The top of the cone to be moveable by means of a lid likewise pierced with holes and made ornamental; let the necks of the bulbs just protrude through the holes, fill every layer with moss, and make each ring a distinct colour. But in this and all similar cases they must have abundance of light and air from the moment of coming up, or the sturdy little hardy Northerner will look as delicate and feeble as a European in the worst parts of West Africa. The Crocus is more impatient of in-door culture than either the Hyacinth or the Tulip, and few should pay much attention to it in-doors who have the opportunity to grow it in the open garden.

THE RANUNCULUS.

There are no flowers in existence more perfect in their beauty than some of the finer kinds of Double Ranunculus; none more charming for delicate variety of colour, or more vivid, as in the case of the Turban kind. The Scotch Ranunculus is the most perfect in form, but the Persian kinds surpass the Scotch in richness of colour. For effect, the Turban is unapproachable, and this leads to its being more frequently cultivated than the other kinds, though they merit a place quite as highly. The best soil for the finer sorts is a retentive loam from the surface of a good old pasture, with the addition of some well-rotted cow-dung, peat, leaf mould, and silver sand, all to be well incorporated before using. It is desirable that the rich soil be placed a few inches below the tubers, and these to be covered with loam and silver sand. Perhaps the best time of planting is the month of February, as they are somewhat tender, and, if planted too early, might start from the ground before the danger of severe frost is over, when they would require a great amount of extra care in protection, or there might be a risk of losing the bloom. The Ranunculus requires a firm soil, and it is desirable to work up the beds some time before planting, in order that the roots may be placed firmly.

For planting select a fine day, and stir the surface of the beds to a depth of three or four inches; draw the drills out at about five inches apart, sprinkle a little sand along them, and insert the bulbs at a distance of about four inches, pressing each root gently into its place; then cover with silver sand, and level the beds in the usual manner. If severe frosts come on soon after planting, cover the beds with straw or mats; when the foliage shows fairly, fix the soil about them, and even tread or rake the intermediate spaces.

THE IRIS.

Next to the Lilies, the Irises exhibit the largest and most beautiful individual flowers of any hardy bulbs, and they are about equally neglected. It is a large family, and both the rhizomatous and bulbous kinds are of surpassing beauty of colour; in the latter section, the English and Spanish Irises are pre-ominent; nobody can have observed these in flower without admiring them. They are readily grown in our gardens, preferring a sandy deep and free soil; a mass of the mixed kinds is a sight worth seeing. The Spanish and English kinds may be mixed in the same beds or patches, or they may be planted in alternate patches along a border.

Of the various Irises, *reticulata* is a diminutive gem, flowering very early in Spring, and exhibiting a contrast of rich purple and gold rarely or never seen in a flower. Being rather small, it should be placed in some favourite spot on rock-work or the like, and be treated to a very nice bit of compost, so as to encourage it to increase, as it is at present very scarce. The wonderfully large and curiously spotted *I. susiana* is worthy the attention of all who love very curious plants. We believe it may be grown well out of doors in some favoured parts of the south of England; but we always grow it in frames, and place it in the greenhouse when in flower. *Iris persica* is a sweet little gem for gentle forcing in Spring, and has a delicate perfume, but *reticulata* is the best of all the dwarf Irises. The Peacock Iris (*pavonia*) is a flower of rare and distinct beauty of colour.

ENGLISH IRIS.

It is a matter of urgent necessity that the bulbs be planted as soon as possible after received, as they are very difficult to preserve when out of the ground. The collection subjoined comprises the finest and newest varieties in cultivation.

THE AMARYLLIS.

The showy beauty of these plants has long commanded a position for them in our intermediate stoves and show houses, and the new kinds which are occasionally sent out are likely to considerably add to their popularity. *Vallota purpurea* (see page 27)—sometimes called *Amaryllis purpurea*—is a fine free-flowering addition to this group. They are, as a rule, starved and dried up too much; we have never seen them so well grown as in a light intermediate stove, in which they were not dried off quite as is customary, but allowed to grow as they liked; they all like a good loamy soil. *A. formosissima* does best when kept dry in Autumn and Winter, either in or out of pots, potted in Spring, assisted with hot-bod treatment, and, when the flowers and leaves appear, watered. The *vittata* group and its numerous crosses are the hardiest, and may be made to bloom according to treatment, keeping dry and at rest occasionally; a little bottom heat in a pit will facilitate their blooming.

THE SCILLAS.

Among these we have some of the oldest and best and loveliest of all Spring and wild flowers. Every bulb grower knows and admires the Siberian Squill; but his admiration should not stop there, for there are others of the family well worthy of culture, thoroughly hardy, and quite at home about our gardens. What, for instance, can look better among medium-sized herbaceous plants, and along the margins of shrubberies, than patches of *Scilla campanulata*, and its pure white variety, *alba*? *S. hyacinthoides* is a kind that somewhat resembles this, though distinct from it; we have found it a strong-growing useful kind. *S. siberica* is exceedingly popular, from the singular beauty of its colour; it is useful in many positions in the flower garden, and often displays its vivid blue in-doors among the dwarf bulbs in baskets, &c., &c. We have used it with charming effect as an edging to a small and choice bed. The slugs are fond of eating its leaves, as they are of many other choice bulbs; they should be picked off at night, and in moist weather, and destroyed by some means or other. *Scilla bifolia* is a neglected species, second only to *siberica*, and some of those who grow it largely think it quite as good as that species; it is a deeper and softer blue, rich, however, and very free to flower and grow in our ordinary soils. The improved varieties of the common *nutans*, or *belgica* as it is often called, are also deserving of a place.

IXIAS AND SPARAXIS.

In praise of this class of plants, we extract the following notice from the *Gardeners' Chronicle*, in reference to some cut blooms exhibited by us at the Flower Show at the Royal Botanic Gardens, Regent's Park:—"While speaking of cut flowers, we may mention that a charming box of these flowers and those of other bulbous plants was shown by Messrs. Carter, of Holborn. These received, as they justly deserved, a large amount of attention. They were shown in considerable numbers, and exhibited great variety of colour. Let us hope that contributions like this may have the effect of bringing this beautiful class of plants into more general cultivation than it has hitherto received." This truly describes their merit, but no words can describe their extraordinary variety of vivid colour. The best season for planting is during the early Autumn months; the most suitable soil is one composed of pretty nearly equal proportions of loam, peat, and silver sand; three or four roots, or even six, in a pot four or six inches in diameter. They should be well drained, and placed in a cold pit till free root growth is made, receiving one watering after potting, and then being let alone till the roots are fully formed. When in flower they are fit to grace any position. In favourable parts of the country, and in light free soils, they may be planted in the open air, six inches deep, however, whereas in pots one inch in depth will suffice. The culture of Sparaxis is similar to that of Ixia.

SPARAXIS.

Of all plants under cultivation, none produce a greater variety of striking colours than the Sparaxis; and a good bed of mixed colours is for radiant beauty surpassed by no other flower. Similar to the Ixia, to which they form admirable companions, they may be grown in pots. The best varieties are those raised from *tricolor* and *grandiflora*; if grown in a border, they will require protection in Winter; if in pots, place four or five in a 6-inch pot in sandy peat, with pure sand round the roots, and water only when growth has commenced: remove to greenhouse or parlour to bloom.

FRITILLARIES.

These are very pretty, and handsomely marked, and may be grown either in pots or borders; they will flourish freely in a rich garden soil with plenty of sand, or in a compost of loam, peat, leaf mould, and sand in equal parts.

Very fine mixed, in great variety.....10s. 6d. per 100; 1s. 6d. per dozen.

CROWN IMPERIALS.

This flower, which belongs to the Fritillary tribe, is exceedingly handsome, and should be an inhabitant of all gardens of any size; looks remarkably well planted at intervals of two feet in a bed of Tulips, relieving the bed from a low level, which is sometimes monotonous; grows very easily, but requires abundance of sand; forms an excellent background for the more dwarf-growing bulbs.

Maximum, single red, 10s. 6d. per dozen; 1s. each. | Maximum, single yellow, 10s. 6d. per dozen; 1s. each.
- Fine mixed, various colours. ...4s. 6d. per dozen; 6d. each.

THE GLADIOLUS.

Bulbs ready to send out in the middle of November.

This magnificent tribe of plants is too well known to require a single word as to their merits; every autumnal flower show exhibits their glorious beauty and variety, and every lover of a garden must be sufficiently acquainted with their merits.

We have great pleasure in introducing to the notice of our customers the following splendid collections of Gladioli, which have been selected by us from the stocks of the most celebrated French and Dutch cultivators; we wish also to call attention to their moderate price.

For pot culture, light turfy loam and sand, with good drainage, is desirable, mixing this compost with well-rotted leaf mould, in about the proportion of one-third; prepare a bed of litter from the stable, which cover with tan, or any dry and light composition, and place a frame on it, in which plunge the pots: give plenty of air, and withhold water until the bulbs have made root, and the leaves appear; it may then be carefully given, when there is no danger of frost. Should the winter prove very severe, bank the frame up well with dung or litter, and cover the lights with straw or hass mats. If it should not be convenient to carry out the above directions the following will be found a very good method of cultivation—pot in sandy loam as above, and place the pots in greenhouse or conservatory, near the glass, taking care that the degree of temperature is sufficient to keep out frost.

In the open air, prepare your beds or borders by well digging them a spit deep, burying a stratum of good leaf mould or rotten manure at the bottom. The surface soil should be rendered open by mixing sand with it, and being well broken in digging; plant the bulbs in clumps or rows according to fancy, about six inches deep, taking care to cover them one inch deep with sand previous to re-covering with mould. After the roots are planted, rake the ground well, giving it a southern inclination if possible; keep free from weeds, and stir surface occasionally; in severe weather cover the bed with two or three inches of dry litter. In the later stages of growth the bulbs should be kept moderately moist.

Section I.—Ordinary Varieties for Clumps or Beds.

The following seedlings from Gandavensis are more robust in habit than the Ramosus varieties, and are richer in colour. We offer the undermentioned splendid varieties at an unprecedentedly low price. For centres of beds, planted among the Rhododendrons or in shrubberies, their effect is magnificent.

MISCELLANEOUS HARDY AND OTHER BULBS.

Into this class come many things of the highest beauty, and which are in many cases insufficiently known or appreciated in our gardens. It is a class that is included in many catalogues, but, from generally presenting not a few subjects of inferior character, the really good and effective plants have been neglected with the worthless. Our object in this paper will be to select the best, and give hints on their ways and capabilities. None shall be mentioned which we have not known from personal experience in its culture to deserve a wider circle of friends; among them are some very old friends and some strangers. First, then, of

Bulbocodium vernum, as it is the earliest Spring flower we have. It is an old flower, and one that was formerly grown as single specimens in small pots in frames, &c., which prevented due notice being taken of its merits as a thoroughly hardy Spring bulb. When planted rather thickly in patches, or as an edging to a neat bed, then, indeed, its effect, when the rosy purple buds come over ground in Spring, is quite distinct and very beautiful. The flower itself, when fully opened, is not remarkable for much beauty, but it is the effect of the large swelling buds that pleases. It begins to show long before the earliest *Crocus* or *Snowdrop*. It is much recommended in the *Gardeners' Chronicle*, and is really an addition to our Spring gardening resources, particularly when it can be sold as cheap as a *Crocus* for using in quantity. The effect is good for a long time in Spring.

The *Snowflake* and the *Snowdrop* next merit our attention. The Spring *Snowflake* (*Leucojum vernum*) is a fine *Snowdrop*-like flower, but large and neat in habit. It is perfectly hardy, but dwarf and free to do in sandy garden soil. It has been discovered wild in Dorsetshire, and this will no doubt add to its interest for many readers. Of the *Snowdrop*, above all others, it can hardly be necessary to speak. It should be grown by the hundred in every garden, in beds, clumps, edgings, and shrubberies, &c. We have often wondered why small beds of mixtures are not often planted—say, for instance, *Snowdrops* and *Bulbocodium*, or the finely coloured *Crocuses* and *Squills*. We have done so, and with a far better effect than results from growing one kind alone and unmixed. The Crimean *Snowdrop* (*Galanthus plicatus*) deserves a word. It grows quite as free as the common kind, is larger, and will one day, we hope, be nearly as common.

The popular little *Winter Aconite* comes into our miscellaneous selection among the earliest; of it little need be said, except that it is one of the freest and hardest of all known plants, and admirable for dwarf edgings for the Spring garden, or as tufts on the edge of the mixed border. It will grow anywhere.

Erythronium (*Doy's-tooth Violet*) is far too famous and pretty a plant either when in leaf or flower to be omitted from this list. They should be planted in very sandy soil, and used among the dwarfest of Spring bulbs.

MISCELLANEOUS HARDY AND OTHER BULBS (*continued*).

Several kinds of *Muscari* have for ages commended themselves when in flower in Spring, though they are as yet far from being as popular as they should be. What, for grace of form or beauty of colour, can surpass the blue or white *botryoides*? Nothing in the Spring garden! Then there is the "Feathered Hyacinth"—*M. comosum monstrosum*—a singularly good thing as a border flower; while the Musk Hyacinth (*M. moschatum*), though devoid of beauty of colour, is yet most interesting from its free and grateful perfume.

Sanguinaria canadensis is not so often employed as a Spring flower as it should be. Nothing looks more distinct and pretty when fully opened under a bright Spring sun. It is particularly adapted to free moist soils, and half shady positions, but is not very fastidious. It is one of those plants that should be put in the ground the moment it is received, as if not the roots are apt to "go off."

Sternbergia lutea (page 21) is not a Spring-flowering bulb, but a very charming Autumn-blooming one, especially on light and gravelly soils. It is to the Autumn what the yellow Crocus is to the Spring of the year. Well grown on a gravelly soil, we have had tufts of it as large, and as full of rich yellow flowers, as those of the yellow Crocus could be.

The various species of *Zephyranthes* belong to the same natural order as *Sternbergia*, but they are suited to a different set of circumstances. They like free peaty soil, and shelter of houses, &c., to do well, and then are very pretty, whereas the *Sternbergia* does well fully exposed, and in ordinary soil, provided it be light, or gravelly, or sandy. In pots the *Zephyranthes* does well treated like an *Ixia*.

There are two hardy *Crinums* well worthy the attention of all lovers of hardy plants, which are not nearly so often seen in gardens as they ought to be. They are perfectly hardy in this country, and the flowers are sweeter and more beautiful than some species that are grown at great expence in the stove. We refer to *C. capense* and *C. album*. Plant in very deep and rich soil in a sheltered position, where the leaves may escape laceration from over strong breeze, and the result will be a succession of fine large fragrant blooms during the Summer months, at least so it will be when the plants are established.

The *Fritillaries* (page 22), especially the English one, deserve our best attention. What can be prettier than nice tufts of *F. meleagris*, especially in its paler varieties, and its fine white variety sometimes called *F. praeor*? Then there are the *Crown Imperials*, which look so showy and imposing around shrubbery margins in Spring, or in the background of the bulb arrangement, wherever that may be.

For pot culture, and for graceful conservatory decoration in Spring, the *Lachenalias* are not sufficiently used. Nothing can look prettier than 6 or 8-inch pots well filled with blooming plants of these. The flowers are so gracefully coloured and disposed that they are universally admired. It is too often that cultivators display no bulbs but Hyacinths, Tulips, and the like, the result being a sameness, which is, to say the least, not desirable in a garden. How different when various other good bulbs are associated with the popular ones! Nothing can be more distinct from the ordinary type of "Dutch Bulbs" than the *Lachenalias*, and nothing can be named more suitable for placing round the edges of vases or baskets filled in the centre with Tulips, Hyacinths, and Narcissus. They merely require potting in any ordinary free soil used for that purpose, and cold frame or pit cultivation near the glass till they begin to show their flower stems, when they may be removed to the greenhouse, the conservatory, or the window. They bear a little gentle forcing very well.

We recommend *Ornithogalum arabicum* as a very noble species, quite hardy and free in good light soils and in warm situations. It is a handsome and striking flower.

Some of the species of *Oxalis* are well worth growing, particularly *Bowiei*, which we have remarked to do splendidly on warm soils in the south of England; and, when planted close against a wall, and in a very sandy soil, in most parts. *Floribunda*, *lasiandra*, *spectabilis*, and *versicolor* are among the better kinds.

Camassia esculenta is a handsome hardy blue-flowering bulb, well worthy of culture, and interesting too. It is the *Quamash* of the North American Indians. It grows in great abundance in swampy plains on the north-west coast of America, and the Indians visit those plains in great numbers for the purpose of collecting them. It is a handsome thing when well grown, and, like most bulbs, does far better on deep sandy or free earth than in any other.

Bobartia aurantiaca we have proved to be a hardy and useful bulb, gay in colour, and free to flower.

Alstroemerias are made a fine feature of in some gardens, and they are worthy of attention. The varieties of *Chilensis* do very well out of doors, particularly if planted in deep beds of free soil; peaty soil suits them to perfection, but we have seen them running wild among shrubs in a deep rich loam.

The genus *Tigridia* is justly considered a splendid one, and though the flowers do not last so long as many of an inferior type of beauty, yet their gorgeous character, and the freedom with which they are produced, makes up for any deficiency in that way. They are best kept in a dry state during the winter, and started in April, either to flower in pots or in groups in the flower garden or bulb ground.

The *Tritomas* have of late years made themselves a conspicuous ornament in nearly every British garden, and, from their surpassing stateliness, and brilliancy of colour, are certain to occupy a still higher position. They are not only effective in the highest degree, but are also of distinct and elegant habit and profuse leafage, and features more to be desired in our gardens at present than any others. As single plants in beds in the back rows of the mixed border, or indeed in almost any position, they are unrivalled. Not their least merit is that of sending up their strong spikes when most other flowers are thinking of going to rest. *T. glaucescens*, *grandis*, and *uvaria* are the best kinds. The first named is beyond measure the best and freest for the general cultivator. *Grandis* is large, late, and magnificent, and not as yet so plentiful as the others. It grows very tall.

The *Watsonias* are handsome and attractive bulbs, somewhat after the fashion of a *Gladiolus*, and may be cultivated with success on a deep dry warm border. The bulbs should be placed at from six to nine inches deep, and in the months of October or November. If grown in pots, the treatment that suits *Gladiolus*, *Sparaxis*, &c., will also suit *Watsonia*.

MISCELLANEOUS HARDY AND OTHER BULBS (*continued*).

Tritonia aurea is a popular plant of much merit, but we think it will be found, on fair trial, that *T. crocata* is not only more brilliant and beautiful, but also more useful to the gardener, as the following extract may prove :—

"This is now rather an old plant, but few, if any, new plants in its way are so useful for conservatory decoration. That many old plants now lost or neglected are far better than those frequently introduced with high praises and higher prices, is a mere truism among gardeners, but I confess to having often looked for these 'good old things' than to have found them. However, at Cliveden a short time since, I had a very 'lucky find.' There, in a long span-roofed house—something between a greenhouse and intermediate house—a most brilliant and novel effect was produced by a number of plants of *Tritonia crocata*, in 48-sized pots. The plants were placed at intervals of a few feet along the edge of either bench, a few inches from the front and behind the small row of dwarf-flowering plants that ran along it. From each small spot sprang about a dozen branched flower spikes, and of these the heaviest ladon and fullest in flower fell over and below the front edge of the bench; others were drooping horizontally, and some were nearly erect, so that the passage straight through the house was most gracefully fringed with flowers of a brilliant orange scarlet—almost as effective a colour as that of *Tulipa gesneriana*. The individual flowers, too, are large, and altogether the plant is more desirable than any of its order that I have seen used for greenhouse ornament. It is a great favourite with Mr. Fleming for basket and drawing-room embellishment, and droops over the edges of vases, &c., very gracefully and effectively.

"This *Tritonia* is readily forced, 'and may be had in flower six months of the year.' The plants seem to have been cultivated in the simplest manner. They are annually shaken out after going to rest, and ten or twelve bulbs replaced with fresh soil in 48-sized pots. Being of easy propagation, a stock will not take long to get, and that accomplished—say to the extent of from 24 to 100 pots, according to the wants of the conservatory—the gardener will find he has a valuable and distinct subject for its decoration. I may add the flower stems were not staked, and that the plants are grown in cold pits when not in flower or required for forcing."—WILLIAM ROBINSON, *Gardeners' Chronicle*.

The *Babianas* are a pretty class of Cape bulbs, half hardy, and requiring much the same treatment as *Ixias* and the like. They may also be grown in a warm border in very light soil; protected however in winter, except in the warm parts of the south of England, where no doubt these and many other slightly tender bulbs might be grown to a perfection unattainable about London.

Among the *Tropæolums* are not a few bulbous kinds distinguished by much beauty, and suitable either for conservatory or flower-garden work. They delight in rich free loam, leaf mould, and sand. The best kinds for pot culture are *azureum*, *brachyceras*, *Jarvatti*, and *tricolorum*. They should be potted in Autumn, and allowed to make way all through the winter in an airy greenhouse, the stems being trained up light trellises of some kind. After the blooming season, the bulbs should be allowed a rest of a few months. *T. pentaphyllum* and *speciosum* are among the best half-hardy kinds for growing against walls, on trellis-work, &c., in sunny warm places. Protected in winter by some loose material, they may remain and do well for years.

Anomatheca cruenta is a pretty and rather hardy bulbous plant: if grown in pots, it requires treatment like the *Ixias*. It may be used with good taste as an edging, or dwarf plant in the bulb border. By the way, every garden in which bulbs are appreciated should have a well-made border of this kind, in which all rare and much valued plants may be preserved and propagated. About four feet wide is the best size, and the bulbs should be arranged in lines across it. The soil should be of the freest and best character for three feet deep, and then all bulbs will freely grow in it—sandy of course.

Triteleia uniflora is a plant we particularly wish to recommend, and that it is worthy of it, the following extract from *The Field*, of April 21st, 1866, may prove :—

"A new Spring Flower—*Triteleia uniflora*.—We have much pleasure in recommending this pretty South American plant to the notice of such readers as take an interest in Spring gardening. It is not new in the sense of having been recently introduced to the country, but quite so as regards its use in the open air; and this is a pity, as with us at present it is quite equal to the Siberian Squill, or any other first-class Spring flower in cultivation, being quite distinct in aspect and colour from all. It is a native of Mendoza, introduced about thirty years ago, but chiefly grown in frames and in pots and in botanic gardens, where its merits as a hardy Spring flower were not observed. The flowers are nearly as rich and a half across, white, with a delicate band of blue along the centre of each petal, and emit a fragrance similar to that of the Persian Iris. Dutch readers, and those who delight in the aroma of the Allium, may be pleased to learn that when the leaves are bruised they smell remarkably like those of an Onion, while those of a different turn of mind will be consoled by the reflection that bruising the leaves of such a pretty little plant may with advantage be left out of its treatment. In an open and exposed position it has grown about six inches high, and flowered abundantly, the blooms closing at night and looking their best during sunshine, and the leaves seem capable of standing greater hardship than even those of the Snowdrop. Whether an unusually severe frost like that of '60 would kill it we cannot say; but we have no hesitation in pronouncing it a real acquisition to the Spring garden. It may be had comparatively cheap with the bulbs in Autumn, or, indeed, at any other season, in one or two of the London nurseries."

Arum Dracunculoides, *italicum*, and *crinitum* are not ornamental in the sense that the previously mentioned plants are, yet, from their distinctness of habit, and interesting botanical character, they are welcome to many cultivators. *A. crinitum* is a most extraordinary—almost a frightful flower; grow in good soil in a sheltered position.

Colchicum autumnale (the Autumn Crocus) should not be left out of a selection of this sort, as its flowers, peeping through the bare earth in Autumn, have a charm for many.

We finish with the exquisite genus *Cyclamen*, to which belongs the most beautiful of all dwarf winter and early Spring-flowering bulbs. If we had but the one species *persicum*, our in-door gardeners would possess a charm which no other known plants could produce. All visitors to the Metropolitan Spring Shows must have been struck with the great variety of colour displayed by this plant, from pure pearly white to rich rosy or violet crimson; not a few of the kinds are delightfully fragrant; even the leaves of the plants, when well grown, are ornamental, and a good plant keeps flowering for many weeks in succession. In the dawn of Spring a fine bloom may be had from those plants, without which, indeed, the greenhouse is not furnished; they bloom for weeks in rooms without injury. For out-door work, choice borders, &c., some kinds are admirable, particularly *hederaefolium* and *europeum*, these we have seen make a charming display out of doors in many gardens; some of the other species are highly interesting, and all are pretty, though for the generality of cultivators those we name are the best kinds. The best soil for the greenhouse kind is one composed of leaf mould, silver sand, and loam. After the bloom of the *Cyclamen* is past, the plants should not be immediately dried off, but allowed to grow. During the Summer they should get a partial rest, standing on a cool shady border, and then in Autumn taken to an airy greenhouse, where they may have plenty of light and a full allowance of water, when in vigorous health, during their growing and flowering season. They should be potted or top-dressed, as the age or state of the plants may require, in Autumn.

of some of the fine garden varieties like Sir Walter Scott, David Rizzio, Queen Victoria, the large Golden Yellow, or any of the striped and various coloured varieties. These are as free of increase and as easy to cultivate as the commonest kinds, while their beauty and rich colouring is far in advance of them. As for culture, they will grow in almost any soil, preferring that which is open, rich, and light. To establish them in the places we have indicated, nothing but the more dibbing in of a root here and there is necessary. With a wooden dibber make a hole a few inches deep, say three, and drop in a bulb, either filling in with soil, or simply pressing the spot well with the foot, or by inserting the dibber again by the side of the hole, so as to press it in, pressing down the surface as firm as you can with the foot. In most kinds of ground the bulbs will not only grow well, but increase.

In the wild and semi-wild department it will be better to spread them about in a very irregular and natural kind of way, if we may so speak—a pretty close yet irregular group here, a thin sprinkling there, and in quiet places single patches. Two effects should be sought—one to have a rather dense spread of flower among the grass; the other, isolated little groups here and there: both, if well done, will prove charming. About the extensive or even the minor class of country places, there are many spots which may be embellished in this way. In the smaller class of suburban garden, &c., where retired grassy spots are not to be had, a good result may be attained by putting rather close tufts of Crocuses along the margins of the shrubbery, or clumps of small trees or borders. By alternating them in groups with other Spring flowers in this way, a capital result may be attained, and nothing interfered with, as the ground may be readily covered in Summer when the leaves of the bulbs are down. So much for the Crocuses—any varieties that may be had at a cheap rate will prove suitable for this purpose. It would be a good plan to plant some bulbs on comparative warm and sunny banks, &c., if such occurred, and others, on the contrary, in deep soil and cool positions, so as to provide for a succession of bloom.

The Squill family is the next to be noticed. They are pretty plants, with blue, lilac, or white blossoms, arranged in a spike or cluster. Some of these, offered cheaply in our catalogue, are best adapted for the purpose. The white and blue varieties of *Scilla bifolia*, as well as *S. siberica*, are charming early-flowering kinds, though, being somewhat dwarf, are perhaps best adapted for borders. *S. campanulata* and its varieties; *S. nutans* (the Wood Hyacinth) and its varieties; as well as *S. hyacinthoides*, are all capital for our purpose, and will adapt themselves to all kinds of grounds and positions like native plants. When tufts of these peer forth in Spring from near the margin of a shrubbery, or by a woodland walk, there are few things to equal them for beauty. We cannot too highly recommend the use of these Squills in this relation.

Then there is the popular and showy *Narcissus* family. The Double Daffodil, or Lout Lily, is one of the most common of these hardy and showy fragrant plants, admirably adapted for gardens, and not half sufficiently grown in them, but even better adapted for naturalisation in the places spoken of. But there are others more worthy of attention—prettier, sweeter, and hardier. What, for instance, could surpass tufts of the charming Pheasant's-eye *Narcissus*, occurring here and there along wood or pleasure-ground walks, or better still, in some ragged stony nook, like an old chalk or gravel pit, or even a bank devoted for the purpose of growing a few beautiful Spring things in a free and half-wild state? This Pheasant's-eye *Narcissus* (poëticus) is a flower admired by everybody—thoroughly hardy, will grow in any soil, must, therefore, be a conspicuous member of the body we are recommending for

naturalisation. *Narcissus odorus* is quite distinct from it or the Daffodil, yet a most charming plant not at all sufficiently seen in gardens. It is of the clearest yellow, abundantly produces flowers, and is the sweetest of the sweet. It is not a sickly or unattractive odour, like that of some of its brethren, but gratefully fragrant. The leaves are dark green, and rather rounder and narrower than most of the family. It is commonly known and sold as *Campanul Jenquil*. It will prove admirably suited for planting near the edge of shrubberies, &c., where its masses of beautiful yellow will prove most attractive in Spring. To these can be added two fine single kinds, sold as Trumpet major and Trumpet sulphur; and some of the fine double varieties, as well as the common sweet-scented double white. Perhaps the prettiest and most showy of all is *N. bulbocodium* (the Hoop Petticoat *Narciss*), singularly bright and effective, and wonderfully free blooming.

The Wild Tulip (*T. sylvestris*), generally sold as *T. florontina odorata*, would also be highly effective if used in this way. It is a gorgeous flower of six large bright yellow petals. The singular and curious Horned Tulip (*T. cornuta*) could also be used; clumps of it would have a striking effect, and be sure to elicit warm admiration. Some of the cheap and commoner forms of the early-flowering Tulips, such as the Early Single and Double Van Thols, Gloria Sol's, and others, could be used; their bright and glowing colours would nicely vary the soberer tints of blue, white, and yellow furnished by the other flowers recommended.

There are also the Snake's-head Fritillary, a plant that grows in meadows very freely, and therefore the very plant for these grassy nooks, glades, and verges; the popular Crown Imperial or *Fritillaria imperialis*, with its charming ring of pendant flowers, and the varieties also with vari-coloured and richly-tinted blossoms; *Loucojum vernal*, a kind of aristocratic-looking double Snowdrop, is another capital adapted for our purpose, especially as it can now be found wild in some parts of England; unfortunately it is very scarce, and so high-priced; *L. aestivum*, a cheaper and commoner species than *Vernal*, and nicely effective also; and

need we recommend the Lily of the Valley for this purpose? How charming it is in a garden! But how much more delightful to meet with it holding its own among the wild crow's-foot brambles and grass in thin woods? The Lily of the Valley will grow well in any ordinary soil, either in a wood, or margin of a shrubbery copse, or such-like place, and will in such positions prove a perennial source of interest and beauty. Then in the drier and more open spots, the commoner Ornithogalums might be planted with great advantage, particularly the Star of Bethlehem. They particularly enjoy chalky dry spots, though hardy enough for almost any position. The beautiful blue *Anemone apennina* is a delightful plant for thin woods, especially for the sides of grassy walks, passing under high trees. So is the pretty white-flowering Wood Anemone, and the white-blooming Wood Oxalis; a delicate and lovely little flower when soon growing in patches in this manner.

Among the flowers so well adapted for this purpose may also be mentioned, as prominently useful and singularly gay, the common Primrose and its improved forms. In great variety are these now to be met with here and there, and they are continually being produced in new and varying forms of attractiveness. When

growing in these sheltered positions, these Primroses commence blooming about or soon after Christmas, and in the more sheltered nooks and corners even earlier, and continue to flower for a considerable period. We have in some instances seen as many as twenty or more distinct shades of colour, the deepest coloured being of a dark crimson hue, the palest as pure as the driven snow. All possess more or less bright yellow or pale orange centres, large and striking, and adding a kind of brilliancy to the diverse hues of colour surrounding the centres. Seed of these pretty Primroses, if scattered over suitable places, will readily grow and quickly produce blooming plants. Some pretty forms of the Cowslip may be added to the foregoing; even the yellow Cowslips of the fields are by no means to be despised as Spring decorative flowers. The giant crimson Cowslip is a glorious plant for our purpose, and deserves to be much better known. Transplanted to shrubberies and such-like places, and subjected to little higher conditions of cultivation than those which surround the Primrose and the Cowslip in the meadows, the plants soon gain great strength, and produce numberless trusses of flowers, that lend a grace and simple beauty to the locality in which they mature their native loveliness.

SPRING-FLOWERING BULBS.

ONE great merit in Spring-flowering bulbs is the ease with which they are made to produce their flowers. This, added to their comparative cheapness, is the reason why they are so eagerly sought after, and certain

and of varying the colours, so that the bed, while any of the bulbs were in flower, presented a massive display of colour. The bulbs were all newly imported, and were planted so that they might grow and increase, and have plenty of time to form and ripen the bulbs, as it was not intended to take them up every season. The bed was seven feet wide, and about four times that length. The arrangement of the bulbs was as follows:—They were placed in rows ten inches apart across the bed, the depth of planting varying according to the size of the bulbs, that is, about four inches deep for Snowdrops, a little deeper for Crocuses, about six inches for Hyacinths, and the others in proportion. The first row consisted of early Tulips, intermixed with Snowdrops, the second of Hyacinths, the third row of late Tulips and Crocuses, the fourth of Winter Aconites and early Narcissus, the fifth row of early Tulips and late Narcissus, the sixth row of Hyacinths and Winter Aconites, seventh row of Snowdrops, Scillas, and late Tulips; and so on throughout, varying and mixing the colours and sorts as far as was convenient—not the most scientific arrangement perhaps, but when in bloom the bed had a most pleasing effect. From the time the earliest began to bloom till late in May, when the double white Narcissus was in flower, it presented quite a gay appearance. By midsummer the leaves of all but the late Narcissus had died down and were removed, and the surface of the bed was pricked up with a fork and sowed with *Phlox Drummondii*. By the beginning of August this began to flower, and continued till the Winter, when the bulbs again came up and flowered, and the bed underwent the same course of treatment.

This method of treating bulbs is certainly preferable to the old mode of managing them in villa gardens. They are often put in borders already too crowded with shrubs and miscellaneous plants, and are forked up just as they begin to grow, at the usual Autumn dressing of the borders, and rarely survive the second season. If by any means a piece of ground can be devoted to them, and they are managed in some such way as that just described, it will be not only more satisfactory, but the bulbs will increase instead of diminishing. We do not discourage their planting in mixed borders, but it is necessary for their well-doing that they have every chance of developing their foliage, as well as the flowers; that they are not crowded amongst other plants, as they are likely to be injured by the exhaustion of the soil, caused by planting too thickly.

also by means of Hyacinths, which vary

As regards the season of flowering, this may be prolonged by using such bulbs as flower successively, beginning with Winter Aconites, followed by Snowdrops, Crocuses, early Tulips, Hyacinths, early Narcissus, medium Tulips, late Narcissus, and late Tulips. These flower during the months of March, April, and May, and by a suitable arrangement they may be placed so that they may all be seen to advantage at their several times of flowering.

We once saw a bed composed entirely of different kinds of Spring-flowering bulbs, planted both with the object of keeping up the display as long as possible,

Collection of Hard-wooded Greenhouse Plants.

No. 8. Price 38s.

Half of No. 7, basket and packing included.

Collection of Hardy Herbaceous Perennials.

No. 9. Price 16s.

Containing 48 hardy Herbaceous Perennials for borders, including Pinks, Phloxes, and Pentstemons, basket and packing included.

Collection of Hardy Herbaceous Perennials.

No. 10. Price 30s.

Containing 100 hardy Herbaceous Perennial Plants, basket and packing included.

	No. of Plants		No. of Plants
Choice selected named Herbaceous and Alpine		Pentstemons, choice named varieties	12
Plants	50	Phloxes " " "	18
Pinks, choice named varieties	8	Pausies " " "	12

Collection of 6 Fruiting Vines in pots.

No. 11. Price 30s. and 36s.

For detailed descriptions of different varieties, see page 48.

6 strong fruiting Vines, suitable for cool greenhouse, best varieties, our selection, price 30s. ; purchaser's selection, from varieties (except Golden Champion and Royal Ascot), enumerated in page 57, price 36s.

Collection of 12 Fruiting Vines in pots.

No. 12. Price 60s. and 72s.

12 strong fruiting Vines, suitable for cool greenhouse, in 6 or 12 varieties, our selection, price 60s. ; purchaser's selection, from varieties (except Golden Champion and Royal Ascot), enumerated in page 57, price 72s.

Collection of Hardy Ferns.

No. 13. Price 21s.

Containing 50 Hardy Ferns for rock-work, &c., basket and packing included.

Collection of Greenhouse Ferns.

No. 14. Price 15s.

Containing 25 Greenhouse Ferns in variety, basket and packing included.

Collection of Stove Ferns.

No. 15. Price 15s.

Containing 12 splendid varieties Stove Ferns, basket and packing included.

Collection of Cacti and Succulent Plants.

No. 16. Price 21s.

Containing 36 selected varieties.

Half the above Collection, 10s. 6d.

LIST OF AWARDS TO MESSRS. J. CARTER & Co. FOR THEIR NEW GERANIUMS
AND OTHER PLANTS DURING THE YEAR 1869.

ROYAL HORTICULTURAL SOCIETY.

MAY 18th.—Special Certificate for

ZONAL AND BRONZE ZONAL PELARGONIUMS.

„ 22nd (PELARGONIUM SHOW).—Second Prize for

BEST GOLDEN VARIEGATED ZONAL (PRINCE OF WALES).

„ „ Third Prize for

BEST GOLDEN-LEAVED PELARGONIUM (CARRIE FOWLER).

„ „ First Prize for

SIX BEST GOLD ZONALS.

„ „ Second Prize for

SIX BEST BRONZE ZONALS.

„ „ First Prize for

TWELVE BEST ORNAMENTAL-LEAVED PELARGONIUMS.

JUNE 1st.—First Class Certificate for

GYMNOGRAMMA CHRYSOPHYLLA MAXIMA.

„ „ First Class Certificate for

GYMNOGRAMMA CALOMELANOS MAXIMA.

„ „ Second Class Certificate for

LISSOCHILUS SPECIOSUS.

„ 2nd.—Third Prize for

ECHEVERIAS.

„ „ Third Prize for

SIX VARIEGATED ZONAL PELARGONIUMS.

„ 15th.—First Prize for the

BEST SIX DOUBLE-FLOWERING ZONAL PELARGONIUMS.

„ „ First Prize for

BEST SINGLE PLANT OF DOUBLE-FLOWERING ZONAL PELARGONIUMS.

JULY 19th (AT MANCHESTER).—First Prize for the

BEST THREE DOUBLE-FLOWERING ZONAL PELARGONIUMS.

ROYAL BOTANIC SOCIETY.

JUNE 5th.—First Class Certificate for

DOUBLE PELARGONIUM (MARIE LEMOINE).

„ „ First Class Certificate for

ECHEVERIA METALLICA GLAUCA.

„ 30th.—Silver Gilt Medal for

TEN TRICOLOR PELARGONIUMS.

CRYSTAL PALACE.

MAY 15th.—Extra Prize for

MISCELLANEOUS COLLECTION OF PLANTS.

JUNE 5th. „ „ „ „ „

„ 19th. „ „ „ „ „

The First Prize for the six best Golden Zonal (tricolor) Geraniums at the Great Pelargonium Show, Royal Horticultural Society, May 22nd, 1869, was awarded to J. CARTER & CO. for the six following varieties:—

PRINCE OF WALES.
Tricolor.

PRINCESS OF WALES.
Tricolor.

EDITH STUART.
Tricolor.

Orders for these three varieties will be booked to be supplied next spring, our stock being too limited to admit of distribution this autumn.

MRS. DUNNETT. (CARTER.)

A splendid tricolor with very compact habit, and flat salver-shaped leaves, with zone intensely dark.

Price 42s. each.

SIR ROBERT NAPIER. (CARTER.)

A tricolor with the darkest and broadest black zone yet seen, indented with brilliant scarlet vandyke blotches, and deep golden margin, flower clear flesh, rose centre.

Price 21s. each.

SULTANA VALIDA. (CARTER.)

A splendid tricolor, first exhibited at the Crystal Palace on the occasion of the visit of the Sultan and H.R.H. the Prince of Wales, and named by request of the Chairman of the Company after the Sultan Mother. Something in the way of *Prince of Wales*, but with a very bright straw yellow margin; a most desirable show variety.

Price 21s. each.

The set, one plant of each of the above three unique varieties, for £3 3s.

PHŒBUS. (MORRIS.)

Free habit, large foliage, of great substance; a most desirable tricolor for winter decoration, retaining its brilliant colour throughout the season better than any other variety, flower bright orange scarlet.

Price 15s. each.

OBERON. (MORRIS.)

A splendid variety, in the way of *Lucy Grieve*, equally bright in colour, but with a much broader nearly black zone, edged and blotched with vivid crimson, and margined with golden yellow, fine large flat surface and round outline of foliage, and a most vigorous grower, bloom corise scarlet.

Price 3s. 6d. each.

The set, one plant of each of the above three splendid varieties, for 21s.

TITANIA. (MORRIS.)

The finest sent out previous to this season, with dark bronze nearly black zone, surrounded and blotched with vivid scarlet, margin a pure belt of bright golden yellow, flower cerise scarlet; a limited number only to offer of this really splendid variety. Two First Class Certificates.

Price 10s. 6d. each.

L'EMPEREUR. (SMITH.)

Leaf broadly margined with bright yellow, with rich zone of brilliant red and black, of free compact branching habit.

Price 3s. 6d. each.

LOUISA SMITH.

Leaf margined yellow, with fine distinct zone of bright crimson red and black, deep olive green centre; this variety is of free growth, with large bold foliage, scarlet flowers, large truss.

Price 3s. 6d. each.

 The set, one plant of each of the above four splendid Novelties, for 10s. 6d.

RUBY RING. (MORRIS.)

Tricolor zoned, with very dark brown zone, blotched and edged with a narrow line of brilliant crimson, good flat leaf and fine branching habit.

Price 3s. 6d. each.

RED GAUNTLET. (MORRIS.)

Tricolor-zoned variety, with flat salver-shaped leaves, bright golden margin, scarlet and chocolate bronze zone; will make a most admirable plant for specimens for exhibition, being a very free grower, and very good habit; lively scarlet bloom.

Price 3s. 6d. each.

NEW SILVER ZONAL (TRICOLOR) GERANIUMS.

PRINCESS BEATRICE. (CARTER.)

Perfectly flat salver-shaped foliage, deeply indented edges, margin pure white, surrounding a scarlet zone, centre bright smooth green; the most distinct of this class yet offered.

Price 5s. each.

MABEL MORRIS. (MORRIS.)

A variety in the way of the well-known *Italia Unita*, raised by Mr. Morris, of Deptford, a much more vigorous grower, and an invaluable borderer, with large convex foliage, margin white, round zone of bright scarlet.

Price 5s. each.

The set, one each of these two varieties, 7s. 6d.

The Second Prize for the six best Bronze Zonal (bicolor) Geraniums at the Great Pelargonium Show, Royal Horticultural Society, May 22nd, 1869, was awarded to J. CARTER & Co., for the six following varieties:—

BLACK PRINCE. (CARTER.)

An excellent bedding variety, of free habit, large foliage, and a profuse bloomer.

Price 3s. 6d. each.

A First Class Certificate was awarded to Carter's Bronze-zoned Geranium *Black Prince*, by the Royal Horticultural Society, July 7th, 1868.

ANTHONY. (CARTER.)

Brilliant chestnut zone on bright golden yellow ground, most vigorous habit, a very desirable bedder; the light salmon coloured blooms thrown up in immense trusses have a most pleasing effect.

Price 3s. 6d. each.

CLEOPATRA. (CARTER.)

Deep maroon zone on light straw ground, with golden margin, very free bloomer; bright rose, thrown well up above the foliage.

Price 3s. 6d. each.

EGYPTIAN QUEEN. (MORRIS.)

This splendid variety was awarded the First Prize at the Royal Horticultural Society's Show at South Kensington, in the autumn of 1867.

Price 2s. 6d. each.

JOSEPHINE. (CARTER.)

Brilliant yellow ground, with very broad clearly defined chocolate zone; scarlet bloom, produced in immense trusses; an invaluable bedder.

Price 3s. 6d. each.

A First Class Certificate was awarded to Carter's Bronze-zoned Geranium *Josephine*, by the Royal Botanic Society of London, June 17th, 1868.

SOUTHERN BELLE. (MORRIS.)

The deepest coloured chocolate zone yet seen; we have secured the stock from Mr. Morris for distribution; he considers this the most distinct he has ever raised, and it will be exhibited by us at all the leading Horticultural Meetings of the coming season; it will also, by favour of Mr. Gibson, be planted out in Battersea Park, with several other varieties (*see* remarks by "R. D." in *Gardeners' Chronicle*, March 27th, 1869.)

Price 5s. each.

Set of the above six most distinct and desirable bedding varieties, 18s.

VARIEGATED GERANIUMS OF 1868, SENT OUT BY CARTER & Co.

We strongly recommend *Egyptian Queen*, *Goliah*, and *Snowdrop*, as being most distinct, free growing, and useful bedding Geraniums, and respectively the best of their class.

EGYPTIAN QUEEN. (MORRIS.)

Golden Bronze Zone.

Price 2s. 6d. each.

GOLIAH. (MORRIS.)

Tricolor.

Price 2s. 6d. each.

ARAB. (MORRIS.)

Golden Bronze Zone.

Price 1s. 6d. each.

EDWIN. (MORRIS.)

Price 1s. 6d. each.

SNOWDROP. (GOODE.)

Price 1s. 6d. each.

ZEBRA. (MORRIS.)

Golden Bronze Zone.

Price 1s. 6d. each.

We offer the set, one plant of each of the six varieties, for 8s. 6d.

NEW IVY-LEAVED GERANIUMS.

L'ELEGANTE. (CUNNINGHAM.)

A very effective and most desirable novelty; foliage brilliant green, with broad band of creamy white, and producing a dense mass of pure white blossoms, making it very attractive and beautiful.

Price 1s. 6d. each.

DUKE OF EDINBURGH. (CANNELL.)

This possesses more pure white than any other kind, and is most remarkable; its growth is as free as the green varieties, and is certainly the most effective of its class. Having a large stock of this, we are enabled to offer it at 1s. 6d. each.

The set of two plants, one plant of each, for 2s. 6d.

FIVE PER CENT. ALLOWED FOR CASH PAYMENTS.

THE NEW YORK PUBLIC LIBRARY

ASTOR LENOX AND TILDEN FOUNDATIONS

1895

—

NEW DOUBLE GERANIUM, "MARIE LEMOINE."

TOM THUMB HABIT (drawn life size).

For description, see page 37. Price 7s. 6d. each.

The First Prize for the best six Double-flowering Zonal Pelargoniums at the Royal Horticultural Society, June 15th, 1869. The First Prize for the best single plant of double Pelargonium (*Marie Lemoine*) at the Royal Horticultural Society, June 15th, 1869. The First Prize for the three best Double-flowering Zonal Pelargoniums at the Manchester Great Show, Royal Horticultural Society, July 19th, 1869, was awarded to J. CARTER & Co., for the following varieties:—

MARIE LEMOINE. (LEMOINE.)

(*Tom Thumb* habit.)

A novelty in colour, similar to *Madame Lemoine*, but of a more chaste pink, and of the same desirable dwarf habit as *Tom Thumb* and *Wilhelm Pfitzer*, averaging in height about 6 to 8 inches, with immense trusses, not more than 12 inches in height, consequently a most desirable variety for pot culture.

Price 7s. 6d. each.

TERRE PROMISE. (LEMOINE.)

Trusses about 7 inches in diameter, flowers very double and well formed; colour light poppy red, very light small-zoned leaf; a new colour.

Price 3s. 6d. each.

VILLE DE NANCY. (LEMOINE.)

Vigorous habit, truss ball-shaped, 7 to 8 inches in diameter in open border, would undoubtedly be larger under glass; flowers 2 inches in diameter, colour of *Gloire de Nancy*.

Price 3s. 6d. each.

The set, one plant of each of the above six unique varieties, 20s.

WILHELM PFITZER. (LEMOINE.)

(*Tom Thumb* habit.)

Dwarf, free-blooming habit and brilliancy of colour; plants not higher than 5 inches had two and three trusses fully expanded, each measuring rather more than 5 inches across; the individual flowers are large, very double, of the most perfect shape, and dazzling orange scarlet colour.

Price 2s. 6d. each.

ANDREW HENDERSON. (LEMOINE.)

Very dwarf compact habit, flower deep scarlet, close truss; good variety for pot culture.

Price 2s. 6d. each.

V. LEMOINE. (LEMOINE.)

This is the king of the double-flowered Zonal Geraniums; trusses about 8 inches in diameter, with flowers of very large size, well formed, and very full; colour finest scarlet, and far superior to others of small habit; leaves perfectly plain, a most excellent bedder. The immense trusses, 15 inches above the foliage, are borne down by the weight of the great number of flowers of which it is composed.

Price 5s. each.

WILHELM PFITZER. (LEMOINE.)

For description, see above. 2s. 6d.

L. THIBAUT. (LEMOINE.)

Full truss, of an exceptional size; the irregularly shaped flowers are produced in great profusion.

Price 3s. 6d. each.

MERVEILLE DE LORRAINE. (LEMOINE.)

Dwarf habit, with a dark zone; truss about 7 inches in diameter, petals very numerous, colour Chinese rose, shaded carmine lake.

Price 3s. 6d. each.

The set, one plant of each of the above six choice varieties, 15s.

MADAME LEMOINE. (LEMOINE.)

Splendid large round truss, containing from 60 to 80 flowers, of a fine rose colour. This is a much dwarfer variety than any of the doubles yet known, and an excellent bedder. First prize at the Paris Exhibition, 1867.

Price 2s. 6d. each.

EMILE LEMOINE. (LEMOINE.)

Truss one-third larger than *Gloire de Nancy*, very double, flesh colour, tinted scarlet in the centre of the flowers, very good bloomer.

Price 2s. 6d. each.

ANDREW HENDERSON. (LEMOINE.)

For description, see above. 2s. 6d.

EMILE LEMOINE. (LEMOINE.)

Truss one-third larger than *Gloire de Nancy*, very double, flesh colour, tinted scarlet in the centre of the flowers. Very good bloomer.

Price 2s. 6d. each.

MADAME ROSE CHARMEUX. (LEMOINE.)

A double species of the well-known *G. Tom Thumb*; very free bloomer.

Price 1s. 6d. each.

TRIUMPH. (LEMOINE.)

Immense truss, full rosette-like flower, brilliant red scarlet.

Price 1s. 6d. each.

MADAME LEMOINE. (LEMOINE.)

Splendid large round truss, containing from 60 to 80 flowers of a fine rose colour.

Price 2s. 6d. each.

GLOIRE DE NANCY. (LEMOINE.)

Flowers rich rosy scarlet, growth vigorous, large truss, and very double.

Price 1s. each.

TRIOMPHE DE LORRAINE.

(RENDATLER.)

Flowers immense and very double, rosy carmine, occasionally striped white.

Price 1s. each.

The above set, 7s. 6d.

FOR AUTUMN PLANTING AND EARLY SPRING DECORATION.

Those marked O are suitable for bedding, those marked † for edging.

NEW BEDDING PANSY "CLARIBEL."

Extract of letter from
the REV. JULIUS
SHADWELL.

The Rectory,
Washington,
Co. Durham.
August 12, 1869.

"You ask me to give you a description of the White Pansy that you had from me. I cannot speak with certainty as to its origin; but it was, I believe, raised from seed in the garden of Middleton Rectory, near Manchester. I should describe it as a white flower, with fine purple eye, of good size, very hardy, most easily propagated, a profuse bloomer, exceedingly

effective, invaluable for beds and borders in the spring and early summer, and universally admired. For distinction's sake, it may be called 'CLARIBEL.'"

From the *Gardeners' Magazine*, July 10th, 1869, page 307.

NOTES ON SPRING
GARDENING—
BEDDING PANSIES.

"I think the beautiful white variety 'CLARIBEL,' to be let out by Messrs. Carter & Co., High Holborn, will take the lead, being in every way superior to the white Cliveden variety."

Price 3s. 6d. each;

ABUTILON THOMPSONII.

Very distinct and pretty foliage plant. The ground colour of the leaf is a bright green, shaded and mottled with yellow, in many instances having quite the appearance of mosaic work; of easy culture.

Price 1s. 6d. each.

ALLAMANDA WARDLEIANA.

The lobes of the corolla are broader, rounder, and of greater substance than any other species; the throat is also darker in colour, and the outer side of the flower is of a reddish maroon colour, which is characteristic of the buds before expanding.

Price 15s. each.

AMARYLLIS ALBERTI FLORE PLENO.

Magnificent variety, introduced from Cuba, flowers a brilliant orange red ground, shot with a fresh bright carmine; base of the petals is of a whitish yellow; flower 6 inches in diameter; instead of anthers, there are from thirty to forty petals, which form a perfect and regularly-shaped flower.

Price 2s. 6d. each.

AMPELOPSIS VEITCHII.

A miniature-foliaged Virginian Creeper, which clings to any building with the tenacity of the strongest Ivy, and producing in great profusion its dense foliage, of a glossy green, shaded with purple, cannot fail to command great attention. It is of exceedingly rapid growth, requires no nailing, and from earliest spring it produces its beautiful purple tinted leaves so thickly as to form the most perfect coating wherever it is planted.

First Class Certificate at the Royal Botanic Society's Show, May 27, 1868, and a similar prize at the Royal Horticultural Show, July 7, 1868.

Price 1s. 6d. each.

SPIRÆA PALMATA.

Of which Dr. Hooker says:—"By far the handsomest species of the genus hitherto imported, and certainly one of the most beautiful hardy plants in cultivation; the deep purple red of the stems and branches, passing into the crimson purple of the glorious broad corymbs of flowers, contrasts most exquisitely with the foliage, which in autumn assumes beautiful tints of brown and golden yellow. *Spiræa palmata* was introduced by Mr. Fortune, from Japan, and has proved itself perfectly hardy in the most exposed position."

Price 21s. each.

NEW HARDY CLEMATIS JOHN GOULD VEITCH.
(Double Blue-flowered.)

We cannot too strongly recommend this magnificent "Double blue-flowering Clematis" as a most valuable addition to our hardy climbers. It is a profuse bloomer, the flowers being very double, of a large size (averaging 4 inches in diameter), and of a beautiful light blue colour. It thrives remarkably well when planted out of doors, and when grown in pots it is most striking and very free blooming.

Price 21s. each.

NEW HARDY CLEMATIS.

CLEMATIS RUBELLA. (Jackman.)

Very rich velvety claret; the deepest-coloured Clematis yet offered; very distinct, and having the advantage of flowering 60 to 70 per cent. of blooms, with five and six sepals. First Class Certificate Royal Horticultural Society.

Price 2s. 6d. each.

CLEMATIS PRINCE OF WALES.

(Jackman.)

Large flowers, of a rich deep violet purple, with red bars down the centre of each sepal; a decided improvement on *C. rubro violacea*. First Class Certificate Royal Horticultural Society.

Price 2s. 6d. each.

The set, one plant of each of the two above charming varieties, for 3s. 6d.

CLEMATIS INTERMEDIA ROSEA.

(Bonamy.)

Flowers large, light rose colour, and come in clusters from 8 to 10; its leaves have the character of being changeable in form, and are somewhat similar to *C. viticella*; it is a very profuse bloomer.

Price 5s. each.

CLEMATIS JEANNE D'ARC.

(Dauvesse.)

Has been tried five successive seasons in the open ground, without any cover during the winter months, and has not suffered in any way from the exposure; flower white, large, and perfect; petals long, with three pale blue stripes on each petal.

Price 7s. 6d. each.

DALECHAMPIA ROEZLEANA ROSEA.

The bloom is produced freely on plants but a few inches in height, and is successively produced from the axillary buds, as the growth progresses, up to the extremity.

Price 2s. 6d. each.

DICHORISANDRA MOSAICA.

A remarkably beautiful stove perennial; it has terete obconquered stems, surrounded at the nodes by close brownish sheaths and bold ovate-acute leaves, reddish purple beneath, dark green above, beautifully marked with close broken transverse irregular white lines; the flowers are white and blue.

Price 10s. 6d. each.

ECHEVERIA RETUSA FLORIBUNDA SPLENDENS. (RENDATLER.)

A fine plant, growing 2 feet high, well furnished with green foliage of a silvery grey tint, each shoot terminating with a bouquet of 25 to 30 flowers of brilliant red, with a yellow centre; it flowers from January, and surpasses all varieties recently introduced; it is of easy cultivation, and very suitable for conservatory decoration.

Price 2s. 6d. each.

ECHEVERIA METALLICA.

Few plants equal this grand House Leek for sub-tropical or alpine succulent gardening, or for the decoration of the conservatory; its large massive leaves, shaded with a purplish glaucous hue, are unique.

Price 4s. to 9s. per dozen; 1s. each.

ECHEVERIA SANGUINEA.

An exceedingly distinct succulent greenish plant, with dark reddish brown leaves, reminding one of the stove *Dracana ferrea*; of most easy culture, and forms a pleasing contrast of colour for greenhouse decoration, and will most likely become useful as a bedding plant; for window and in-door purposes it will be most desirable.

Price 1s. 6d. each.

ECHITES RUBRAVENOSA.

Beautiful climber, fine green leaves veined with bright red; to be compared with the *Anætochilus* tribe.

Price 3s. 6d. each.

ERANTHEMUM IGNEUM.

Long dark velvety-leaved plant, with broad veins of a deep golden colour.

Price 2s. 6d. each.

GYMNOGRAMMA LAUCHEANA.

The best Gold Fern in cultivation, and highly esteemed for decorative purposes.

Price 2s. 6d. each.

GYNERIUM ARGENTEUM FOL. VAR.

New splendid silver variegated form of the well-known popular variety.

Price 3s. 6d. each.

IMANTOPHYLLUM MINIATUM.

A very excellent evergreen, warm greenhouse, or cool stove plant, intermediate between *Clivia* and *Val-lota* or *Amaryllis* in style of growth, with dark green leaves, and large corymbs of erect, large, clear rich salmon or light flame coloured cup-like blossoms.

Price 3s. 6d. each.

IMANTOPHYLLUM CYRTANTHIFLORUM.

Like the preceding in its general habit and growth, but the flowers are a shade lighter in colour, and, instead of being erect, are pendulous. Strong blooming plants.

Price 3s. 6d. to 5s. each.

IRESINE LINDENI. (VAN HOUTTE.)

A most useful and exceedingly effective bedding plant. It is of robust and hardy constitution, and of neat bushy habit and style of growth; the foliage is very striking and effective, of a rich dark red colour, each leaf having a conspicuous amaranth mid-rib. It is admirably adapted either for ribbon rows or the edgings of flower beds, its rich and attractive foliage always producing a striking effect.

This may be regarded as the gem of the season among new bedding plants.

Price 2s. 6d. each.

LASTRÆA OPACA.

Splendid nearly hardy Japanese Fern, hitherto a scarce variety. We have raised a large number of seedlings, and are able to offer it at the following low prices.

Price 1s. 6d. to 2s. 6d. each; 15s. to 21s. per dozen.

PLANTS FOR THE DECORATION OF HALLS, STAIRCASES, &c. (Continued.)

can be introduced with the most desired effect. Of these it is only necessary to particularise the handsome *Lomaria gibba*; *Pteris albo-erecta lineata*, *P. argyrea*, and *P. tricolor*; the various *Adiantums*; the different varieties of *Gymnogramma*, especially *Lauchiana* and *Webbiana*; the curious Bird's-nest Fern, and many others, giving a great variety of leaf formation, of hue of foliage, and of graceful habit.

PRICE.

6	strong canes,	7s. 6d.
12	ditto	12s. 0d.
25	ditto	20s. 0d.
100	ditto	60s. 0d.

A seedling raised by Mr. McLaren, of Ash, Surrey. A rood Raspberry, of immense size, fully twice the size and a fortnight earlier than *Carter's Prolific*, is a most prolific bearer throughout the season. As a criterion of its excellence, we may mention that the raisor has been selling the fruit at Aldershot wholesale at 8d. per gallon more than any other sort. It was exhibited before the Fruit Committee of the Royal Horticultural Society on August 17th last, who awarded it a First Class Certificate, and spoke of it as follows:—

"The variety is remarkable for the size of the berries, vigour in growth, and fertility; the flavour, however, was not particularly good, which perhaps was due to the season, which has not been a good one for bush fruits in general."

In reference to the remarks of the Fruit Committee as to the want of flavour, we think it proper to state that the fruit exhibited was of second growth, and not fully ripened. The raiser guarantees to us that it is of a splendid flavour, and from the immense size of the fruit we can confidently recommend it as a sort likely to give general satisfaction.

GENERAL CATALOGUE OF ORNAMENTAL TREES & SHRUBS, CONIFERS, EVERGREENS, CLIMBERS, AND AMERICAN PLANTS.

To avoid any evil consequences attending delay, the Roots of all Plants sent from the Nursery are packed in Moss. They will, under these circumstances, bear a detention of two or three weeks, without the least injury.

Packages arriving at their destination during a severe frost should be placed in a cellar or frost-proof shed, and not be unpacked till a thaw takes place.

COLLECTIONS OF TREES AND SHRUBS

Will be supplied on the following terms when the selection is left to ourselves:—

RHODODENDRONS.

A selection of the best Scarlet, Hybrid, and other Rhododendrons.

Collections will be supplied at 30s., 36s., 42s., to 84s. per dozen, the selection of kinds left to J. C. & Co.

CONIFERÆ.

J. C. & Co. have the advantage of selecting from an immense stock of this truly magnificent tribe of plants; the collection embraces a large quantity of the leading well-established favourites, in addition to which all the novelties that have appeared up to the present time have been added.

A large number of each kind are cultivated in pots, but by far the greater quantity are planted out in the open ground, and are annually transplanted so as to ensure their removal with perfect safety.

		— — — Van Houtti 1 6

We would particularly beg to solicit the attention of the Public to the two undernamed magnificent Weeping Elms, being varieties of *Ulmus suberosa*, which have been raised from seed, and have elicited the admiration of several of the leading nurserymen and amateurs.

The gracefully weeping branches of these two new Elms are thickly covered with a cork-like excrescence, presenting a very interesting and novel appearance, entirely distinct from all other varieties in cultivation.

Ulmus suberosa pendula.....	Each—s. d. 5 0
Ulmus suberosa microphylla pendula.....	5 0

HARDY CLIMBERS AND SHRUBS.

Suitable for Walls, Trellis, or Pillars.

Those marked (*) are Evergreen.

Those marked with the letter P, well established in pots, and are strong plants.

Each—s. d.	Each—s. d.	Each—s. d.

HERBACEOUS PÆONIAS.

Varieties of *Albiflora sinensis* and *Edulis fragrans*.

From 12s. to 18s. per dozen.

J. C. & Co. beg to recommend their fine collection of this interesting tribe of plants, so easily cultivated, and presenting so gorgeous a display of bloom early in the season.

Auguste Mieliez, outer petals lilac, centre fawn colour
 Beauté Française, bright rose, shaded fawn colour
 Carnea grandiflora pl., white, shaded pink
 Chateaubriand, outer petals bright lilac, centre rose, shaded with salmon
 Chrysolite, outer petals yellowish rose, deep yellow centre
 Duchesse de Nemours, outer petals rosy lilac, with rosy salmon centre
 Edulis, rose, shaded with lilac
 — superba, deep rose, beautifully shaded
 Formosa, outer petals bright yellow, centre pale yellow, edged with crimson
 — alba, pure white, very large and fine
 — rosea, fine rose colour
 Globosa, outer petals rosy lilac, with fawn colour centre
 Grandiflora carnea, pale flesh colour, shaded; extra large
 — nivea, pure white, with pale lemon centre

Grandiflora rosea, deep rose, large and fine
 Insignis, deep lilac shaded; superb
 Lilacina, rosy lilac, large and very double
 L'Illustration, rosy lilac, extra large; a superb variety
 Louis Van Houtte, rosy carmine, shaded, large and very fine
 Monsieur Durafle, lilac rose, large
 Prolifera tricolor, flesh colour, inside yellow, fine
 Pulcherrima, outer petals yellowish flesh colour, beautifully spotted with carmine; extra fine
 Reevesiana, pink and French white; very fine
 Reine des Françaises, outer petals deep rose, with yellow centre
 Sinensis alba, flesh colour, shaded with white
 Sulphurea, white, slightly shaded with sulphur
 Triomphe de Paris, outer petals white, centre bright yellow
 Walkeriaana, outer petals rosy lilac, centre yellowish salmon; extra fine.

NEW CONTINENTAL STRAWBERRIES.

The following new Continental varieties of the celebrated raiser, Mons. F. GLOBE, of Beauvais (Oise), France, are now offered:—

	Per doz.—s. d.		Per doz.—s. d.
Augusta , very large and fine, plant hardy and exceedingly prolific, ripens at the medium season	25 0	Ferdinand Gloede , the finest of that famous grower M. de Jonghe's sorts; fruit large, handsome, bright crimson, with prominent seeds, flesh white and pink, solid, melting, sugary, and with a delicious aroma; plant very hardy, of dwarf bushy habit, and a great bearer	30 0
Belle Bordelaise , particularly fine and desirable variety ..	4 0	Germania (Gloede), fruit of large size, oval, colour light cherry, with prominent seeds, flesh white, buttery, sweet, with a most delicious perfume; hardy, vigorous, and prolific, early, and continues bearing a long time	24 0
Belle Cauchoise (Acher), fruit large, ovate, skin red cerise, seeds prominent, flesh rose, throughout firm and solid, particularly fine and exquisite flavour	12 0	Gweniver (Madame Clements), fine flavoured fruit of medium size, orange red; an excellent bearer, of strong and healthy growth, and forces well	per 100, 36s. 4 0
Bonte St. Julien (Carre), fine fruit, very free and good; a dwarf-growing variety	per 100, 15s. 2 0	Haquin , one of the best new Strawberries of 1888, strong and healthy	4 0
Boule d'Or (Boisselot), the finest Strawberry known, late, very large, and good flavour	5 0	Her Majesty (Madame Clements), fruit very large, conical, regular, and handsome, seeds prominent, skin crimson red and shining, flesh white, firm, juicy, and highly flavoured ...	12 0
Ceres , a very superior Strawberry, large and handsome, quite first-rate quality. Plant unusually vigorous, hardy, and prolific, remains in bearing a long time	25 0		
Duc de Malakoff (Gloede), extremely large fruit, weighing sometimes 2 ounces; a great bearer, and forces well, per 100, 15s.	2 0		

PLANTS FOR AUTUMN GROWING (*continued.*)

	Per doz.—s. d.
Kaminski , first-rate late variety of large size, bright rose, hardy and good bearer	3 0
La Chalonnaise (Docteur Nicaise), good cropper, full size; one of the best Strawberries	3 0
La Petite Marie (Boissolot), fine fruit of medium size, longish, flattened, skin red, shining, flesh red, solid, very juicy and extremely sweet. This is an extraordinarily abundant bearer	12 0
Lecoq Pine , very good late sort	3 0
Lucas (De Jonghe), extra good for forcing, good bearer and hardy, large fruit, shining crimson	3 0
Marguerite (Lebreton), large and prolific, a good kind for forcing	1 6
Napoleon III. (Gloede); remarkably heavy cropper and very late, large and fine flavoured fruit	3 0
Robuste (La), prolific, a first-rate and choice sort	4 0
Souvenir de Kieff (De Jonghe), large, colour bright glossy purple, hardy and prolific	4 0
Topsy (De Jonghe), very desirable variety of strong and healthy growth, fine flavour	4 0

	Per doz.—s. d.
Triomphe de Paris (Bossin), splendid fruit, very large, ovate, sometimes uneven in its outline, skin brilliant scarlet, seeds prominent, flesh pale red, juicy, sweet, tender, and soft; plant very hardy and good bearer	12 0
Vicomtesse Hericaut de Thury .—The <i>Field</i> newspaper of August 7th, says:—"This Strawberry is pronounced by experienced cultivators to be, on the whole, the best and most generally useful now grown. From personal experience we can state that it is also considered the best variety for general cultivation in the neighbourhood of Paris, where Strawberries are grown to a great extent"	per 100, 5s.
Victoria ovata , first-rate, good flavour, and good bearer ...	4 0
HAUTOBOIS.	
La Belle Bordelaise	per 100, 10s. 1 6
ALPINES.	
	Per 100—s. d.
Bush Alpine or Runnerless	6 0
De Versailles	7 6
Janus	12 6
Mendonnaise or Triomphe de Hollande	12 6

STRAWBERRIES.

We have this season potted up many thousands of the finest varieties of the undormentioned, which are now well established in pots, and which we will guarantee to fruit next year, if planted out. So much disappointment is often experienced when runners are put in late, unless previously established, that we are sure this method will be most satisfactory. Where the plants are required at a distance, detention on the journey, or unfavourable weather for planting on their arrival, will be obviated, as they will not suffer like runners just taken up; the extra cost will be amply compensated by the extra vigour of the plantation.

Runners in pots, price 12s. 6d. per 100.
Runners not potted, our selection, 25 of a sort, per 100, 3s. 6d.; 100 of a sort, 3s.

	Per 100—s. d.
Bicton Pine	5 0
Black Prince (Cuthill), early, small, but good cropper	5 0
British Queen (Myatt), fine flavour, requires high cultivation	5 0
Carolina superba (Kitley), fine flavour	5 0
Comte de Paris , fruit large and handsome; a useful kind	5 0
Crimson Queen (Donbleday's No. 2), fruit large, cockscomb shape, very much corrugated and irregular, with a coarse surface, flesh red, solid, and firm, briskly acid flavour; late variety and great bearer	5 0
Dr. Hogg (Bradley), resembling <i>British Queen</i> , but very large and a hotter grower than the <i>Queen</i> ; one of the sweetest Strawberries grown, and—like <i>Sir J. Paxton</i> and <i>Oscar</i> , by the same raiser—will become a favourite, and be generally grown. It received a First Class Certificate from the Royal Botanic Society in 1865, and the same distinction by the Fruit Committee of the Royal Horticultural Society this season	in pots, 15s. 10 6
Eleanor (Myatt), very late, large, and a good bearer	5 0
Eliza (Rivors), excellent cropper	5 0
Elton Pine (Knight), a late kind, very useful	5 0
Filbert Pine (Myatt), extra fine flavour, and heavy cropper, and continues a long time bearing	5 0
Frogmore Late Pine , this is a late variety, and an abundant bearer, coming in with the <i>Elton</i> , but much less acid than that variety ...	5 0
General Havelock (Tiley), early, large, good flavour	5 0
Goliath (Kitley), a well-known old kind	5 0
Hautbois (Myatt), the best of its class	5 0
Keen's Seedling , an early and good sort ...	5 0
Mr. Radcliffe (Ingram). This fine Strawberry originated at Frogmore; the fruit is large, of a bright red colour, and ripens to the point; as regards quality, it quite equals the <i>British Queen</i> —in fact, it is a <i>Queen</i> with a robust constitution, which is quite sufficient to recom-	

	Per 100—s. d.
mend it, and its excellence has been attested by competent judges	in pots, 21s. 15 0
Nonsuch , an abundant bearer	5 0
Oscar (Bradley), fruit large, handsome, and firm, of good flavour, hardy, and one of the best for travelling	5 0
President (Green), a great cropper, with a very small proportion of undersized fruit; colour bright crimson; of superior flavour. One of its good qualities is its firmness, and it will travel and keep better than most varieties; for forcing or early crop out of doors it is highly recommended	7 6
Prince Arthur (Ingram), good flavour, of medium size, a very abundant bearer, and continues to fruit for a considerable time	5 0
Prince of Wales (Ingram), fine flavour, and handsome fruit, early	5 0
Princess Alice Maude , early and handsome	5 0
Princess Royal , an abundant bearer, and an excellent variety for general cultivation	5 0
Richard II. (Cuthill)	5 0
Rifleman (Ingram), large size, excellent quality	5 0
Sir Charles Napier (Smith), large, very heavy cropper; good for general purposes	5 0
Sir Harry (Underbill), large, and first-rate in some situations	5 0
Sir Joseph Paxton (Bradley), a handsome early variety, of a rich dark glossy colour, smooth surface, pleasing shape, and regular outline; forces well, and is a very free grower, and good constitution; the fruit is solid, travels and keeps well, and pleasing flavour, great cropper	5 0
Standard Bearer	5 0
Stirling Castle , large size, and of excellent flavour	5 0
Surprise	5 0
Victoria (Trollope), great cropper, second-class in flavour	5 0
Wizard of the North (Robertson), late, small, abundant cropper	5 0
Wonderful (Jeyos), remarkably heavy cropper, good	5 0

Special quotation for quantities.

In consequence of the extra labour in producing good plants this season, the price is a little higher than usual.

We have much pleasure in offering strong and particularly well-ripened Canes of the undermentioned Vinos, all our own growth. The great advantage derived by planting thoroughly ripened Canes has induced us to pay great attention to our crop this season, and we are consequently enabled to offer them much stronger than usual.

We have also a limited stock of extra strong, short-jointed, well-ripened plants, grown purposely for forcing in pots, and capable of producing six to eight bunches of grapes each next year. The cultivation of vines in pots is becoming so general now, that comments on the many advantages of that system are unnecessary; by planting out vines of this size in vinery borders one season is gained.

Hardy varieties for planting against walls or trellises.—A whole season is often lost, or the plants very much chocked, if the wood is not thoroughly ripened when first planted out; we shall take great care not to send any but what are in proper condition. All other varieties not named in this list can be supplied at the usual prices; those marked **H** are the most hardy and best suited for out-door planting.

THOMSON'S WHITE LADY DOWNES GRAPE.

Was raised by Mr. Thomson, of Dalkeith, from the *Black Lady Downes*. The Vine is of the same vigorous habit of growth as the parent, equally fruitful, sets more freely, requires less heat, and is not liable to scald as the black variety is; keeps as long, if not longer; and has fully as good a flavour. It is guaranteed to be the latest keeping white Grape in cultivation. It received First Class Certificates at the Edinburgh Show on March 20th, 1867, and at Glasgow on the 27th of the same month. It will be exhibited next spring at all the March and April Shows.

Strong Planting Canes, 21s. and 42s. each; extra strong Fruiting Canes, 63s.

	Each—s. d.	s. d.
Strong Canes for planting	5 0	7 6
Extra strong Canes for fruiting and forcing in pots	10 6	12 6

*The varieties marked * we consider most suitable for general cultivation, where a limited number only are grown.*

Bidwell's Seedling, bunches long, berries above medium size, oval, skin thick, of a deep purplish black, covered with a thick bloom, flesh white, tender, and juicy, good quality; for a cool house

***Black Alicante** (Morelith's), bunches six to eight inches long, berries very large, skin thick and tough, of a blue black colour, flesh greenish, firm, sweet, with a fine aroma when fully ripe; a late Grape, and will hang till May

Black Barbarossa, bunches twelve to eighteen inches long, berries of a deep black colour, covered with a thin bloom, flesh tender, juicy, and of a good flavour; valuable late Grape

***Black Hambro'**, H, berries round, deep rich purple, very juicy; one of the finest Grapes for a cold vinery

Black Morocco, a very late Grape, requiring stove heat; bunches large, berries of unequal size, reddish brown, becoming blackish brown when fully ripe, sweet, few or no stones

Black Prince, H, large bunches, berries above medium size, oval, skin thick, purplish black, white flesh, of first-rate quality; ripens well in a cool vinery or against a wall

Bowood Muscat, a seedling from *Muscat of Alexandria*, to which it bears a close resemblance, but is a much better bearer, and earlier; an excellent Grape

***Buckland Sweet Water**, bunches large, berries round, inclining to oval, skin thin, transparent, pale green, becoming a pale amber when ripe, flesh tender, melting, and juicy, sweet and well flavoured; fine variety for a cool vinery

Frankenthal, H, bunches large, and heavy shouldered, skin thick, of a deep black purple, covered with bloom, flesh firm, juicy, and richly flavoured

***GOLDEN CHAMPION**, large bunches, well shouldered, berries larger than any Grape known, flavour new and rich. 21s. to 42s. each

***Golden Hamburgh**, bunches large, loose, branching, and shouldered, berries large and oval, skin thin, of a pale yellow colour, flesh tender and melting, very juicy; an excellent Grape, and forces well

Grizzly Frontignan, round, yellow, shaded red, fine Frontignan flavour

***Lady Downes' Seedling**, fine late keeping Grape, large bunches and berries, flesh firm, sweet, and richly flavoured; a vigorous grower and free bearer

***MADRESFIELD COURT BLACK MUSCAT**, a late Grape, with the most intense Muscat flavour. 15s. to 21s. each

***Mill Hill Hamburgh**, bunches medium-sized, rarely shouldered, berries very large, roundish oblate, skin thick, covered with a thick bloom; a fine variety

***Morris's Black Grape**, H, a variety of recent introduction; berries oval, good-sized bunches of excellent flavour, a very free bearer, and a first-class variety for out-door cultivation

MRS. PINCE'S BLACK MUSCAT, bunches large, long, tapering, well shouldered, berries oval, as large as those of *Muscat of Alexandria*, purplish black, with a thin bloom. 10s. 6d. to 21s. each

Muscat Hambro', bunches above medium size, compact and shouldered, berries rather large, skin tough, but not thick, deep purplish black, covered with a thin blue bloom, flesh tender, rich, and juicy, with a fine Muscat aroma; this fine Grape may be ripened in a cool vinery

MUSCAT OF ALEXANDRIA, oval, very large, pale amber; finest-flavoured Grape grown; requires heat

***ROYAL ASCOT**, berries oval, jet black, flesh firm. 21s. to 42s. each

Royal Muscadine, bunches long, loose, and shouldered, berries large, round, and in compact bunches, skin thin and transparent, flesh tender and juicy, sweet, and richly flavoured

Trentham Black, bunches large, tapering and shouldered, berries of a jet black colour, flesh melting, juicy, rich; excellent Grape, ripening with *Black Hambro'* but keeping plump long after

***White Frontignan**, greenish white skin, covered with thin grey bloom, flesh firm, juicy, and very rich flavour; an abundant bearer and forces well

White Tokay, bunches large and compact, berries large and oval, skin thin, of amber colour, flesh tender and juicy, with rich flavour.

ROSES

THAT FLOWER IN JUNE AND JULY.

Standard Roses are from 3½ to 5 feet.
Half Standards are from 2 to 3 feet.
Dwarfs are either on their own roots, or budded close to the ground.
Only those sorts that are priced in the column for Standards can be had as such this season.
A few of the most esteemed varieties in each class are marked thus *; the letter S indicates such as have large and very perfect flowers, suitable for exhibiting singly; and P such as are of vigorous growth, and adapted for planting against pillars; the letter T is affixed to the kinds most suitable for planting in town gardens.

PROVENCE ROSES.

This is a small group of very fragrant Roses, of which the Old Cabbage is the type; the most remarkable varieties are: *Fringed*, for the elegance of its buds; and *Unique Panaché*, the flowers of which are beautifully striped; they require rich soil, and to be pruned very freely.

Standards.			Dwarfs.		
	s.	d.		s.	d.
Cabbage, T, rose colour		0	6	
*Fringed, bright rose.	1	6	1	0	
White or Unique, pure white	0	6
Roi de Provence, pure white	0	6

MOSS ROSES.

This is a very extensive, and, from the great number of new hybrid varieties recently added to it, has become a very varied class of Roses; many of the kinds partake largely of the habits of the French and Hybrid Chinas, and from their vigorous habit are well adapted for growing as Pillar Roses; to such a P is affixed in the following list. Nearly all succeed well as Standards, and the compact-growing kinds are well suited to plant in beds; a rich soil and free pruning are requisite for the latter.

Standards.			Dwarfs.		
	s.	d.		s.	d.
Baron de Wassenauer, crimson	1	6	1	0	
*Celina, crimson	1	6	1	0	
Common, T, rose blush		0	6	
Comtesse de Murinais, white, large ..	1	6	1	0

*Lanci, P, rose crimson.	1	6	1	0	
*Marie de Bleis, P, bright rose			1	6	1
Princess Alice (Paul's), blush, pink centre			1	6	1
*Roi de Blanche, pure white			2	0	1
*Unique de Provence, pure white			2	0	1
*Vandaël, violet purple.			1	6	1
White Bath, white.			2	0	1

DAMASK ROSES.

It is somewhat strange that a class in which light colours so decidedly prevail should bear the name of Damask. These are all of robust habit, and have large well-formed flowers; as Standards, they form fine heads, and will thrive in almost any situation; only moderate pruning is required.

Standards.			Dwarfs.		
	s.	d.		s.	d.
*Madame Hardy, S, pure white	1	6	1	0	
*Madame Zontman, S, creamy white ..			1	6	1

ROSA ALBA.

The "Celestial Rose" may be regarded as the type of this very interesting and pretty group. These Roses are of the most delicate colours, and have distinct glaucous foliage, and in some instances spineless shoots; being of moderate and compact growth, they form beautiful objects when grown as Standards; they require a soil moderately rich, and liberal pruning.

Standards.			Dwarfs.		
	s.	d.		s.	d.
*Félicité (Parmentier), S, rose flesh ..	1	6	1	0	
La Séduisante, rose	1	6	1	0	
*Madame Logras St. Germain, S, pure white			1	6	1
*Princesse de Lamhalle, white.			1	6	1

HYBRID CHINA ROSES.

A fine group, in which there are varieties of almost every shade of colour. The following may be considered as the most distinct; they are generally of very vigorous habit, and as Pillar Roses form magnificent objects. When grown as Standards the shoots should be trained in the shape of an inverted cone; this will ensure an abundance of bloom. The flowers of many of the varieties are extremely large and well-formed. These Roses will thrive in almost any soil, and should be very sparingly pruned, merely thinning out the old wood that has produced bloom, and slightly shortening the shoots that are retained.

	Standards.		Dwarfs.			Standards.		Dwarfs.	
	s.	d.	s.	d.		s.	d.	s.	d.

Madame Plantier, T, pure white	1	6	1	0	Vivid, P, vivid crimson	1	6	1	0

HYBRID BOURBON ROSES.

These Roses are nearly allied to the preceding, defined from them, however, by the greater substance of their foliage and flowers; nearly all the varieties form very fine Standards, and many are sufficiently vigorous to plant against pillars. The great beauty of their flowers, and the profusion in which they are produced, render these Roses very valuable for pot culture and for exhibition; they require the same treatment as is recommended for the Hybrid Chinas, but should be rather more closely pruned.

	Standards.		Dwarfs.			Standards.		Dwarfs.

					*Paul Ricaut, S T, brilliant carmine ..	1	6	1	0

AUSTRIAN BRIARS AND DOUBLE YELLOW ROSES.

This group contains all the really Double Yellow Roses in cultivation. The "Old Double Yellow" is well known as a capricious bloomer, and should be planted in a warm dry situation against a wall, otherwise the flowers will not expand. *Harrisoni* is a hybrid Scotch Rose of great beauty; the "Persian Yellow" (which is decidedly the best in cultivation) is a true Austrian Briar, and produces large, globular, very deep golden yellow flowers: this and *Harrisoni* succeed well as Standards. All the kinds are very early bloomers, and should be pruned as directed for Hybrid China Roses.

CLIMBING ROSES.

BANKSIAN ROSES.

Strong plants of the following at 1s. each.

These are vigorous climbing Roses, distinct in appearance from all other classes; all the varieties have deep shining green foliage, and shoots, with the exception of *Fortuniana*, entirely spineless; the flowers are white or yellow, deliciously fragrant, and produced in large clusters. They also flower much earlier than any other Roses. It is requisite to plant them against a wall, otherwise they do not flower freely; very little pruning is required, as the flowers are produced on laterals from the previous year's shoots.

*Jaune serin, bright yellow
Jaune vif, yellow

*White, pure white
*Yellow, bright yellow.

The annexed classes of hardy Climbing Roses are adapted for a variety of purposes: planted in long rows against stout poles, and festooned from one to the other, they form an appropriate approach or boundary to a Rosarium. Many of them form beautiful objects on lawns when budded on tall stocks (with a variety of colours in each), and trained in the form of domes. For ornamenting the trunks of large trees, for covering rough banks, rocks, or fences, they may also be used with great advantage. When planted in the latter situations, of course no pruning is requisite; but as Standards, or on pillars, they must be annually thinned out, and the wood that has flowered should be removed.

ROSES—Climbing and other sorts.

CLIMBING ROSES (continued).

Strong plants of all the following Climbing Roses at 1s. each.

AYRSHIRE ROSES.

Alice Gray, T, blush
Dundee Rambler, white, tinged pink
Fortune's Yellow, coppery yellow
Myrrh-scented, T, white, tinged pink

Queen of the Belgians, pure white
Rnga, T, pale flesh
Thoresbyana, white
Thoresbyana, white, small.

BOURSAULT ROSES.

*Amadis or Crimson, T, crimson
*Gracilis, T, rich pink

Inermis, deep red
Inermis, reddish rose.

HYBRID CLIMBING ROSES.

*Rivers's Queen, purplish crimson
Wells's White or Madame d'Arblay, T, pure white.

The Garland, T, white, lilac, or blush
The Garland, T, pure white.

ROSA MULTIFLORA.

Purpurea, rosy purple

Russelliana, purplish crimson
*Tricolor, pink, tipped with white.

ROSA SEMPERVIRENS.

*Adelaide d'Orléans, T, pale rose
Banksiaeflora, white, yellow centre
Donna Maria, pure white
Félicité perpétuelle, T, cream colour

*Jannâtre, fawn coloured rose
Myrianthus, delicate pinkish rose
Princesse Louise, T, creamy blush, fine
*Princesse Marie, T, deep reddish pink

*Rampant, T, pure white, superb.

Climbing Roses, well rooted in large 48 pots, strong plants, may be had at 1s. 6d. each, and 15s. per dozen.

CLIMBING PERPETUAL ROSES.

MUSK ROSES.

The Musk Roses are generally esteemed for their peculiar fragrance. They are abundant bloomers, particularly in Autumn; and, being very hardy and of free growth, are suitable for pillar Roses.

ROSES FOR STOCKS.

Rosa Manetti..... 1s. 6d. per dozen; 8s. per 100.

CHINA ROSES.

In this class is comprised the progeny of two species of Roses, viz., *Rosa indica* and *R. semperflorens*. Many varieties of the latter are our most prolific-flowering and brilliant-coloured Roses of Autumn; they are very suitable for pot culture, and to plant against dwarf walls; the brilliancy of their colours renders them particularly attractive in small beds on lawns; grown in the latter way, they will require a little protection in severe weather. A simple and efficient method of doing this is to cover the beds with ashes, sawdust, or any other light material, to the depth of three inches; a few branches of furze or other evergreens stuck thinly through the beds will also greatly assist. This should be done in November or December, and as the mild weather approaches in Spring, the protection should be gradually removed. If the plants are cut down in Spring nearly to the ground it will much increase their vigour. A light and rich soil is most suitable for these Roses.

NOISETTE ROSES.

The "Old Blush Noisette," an American hybrid Rose, is the type of this class; its descendants have, however, deviated much from the characteristics of their first parent, and many of our best varieties are evidently nearly allied to the Tea-scented Roses. These produce flowers of very large size and perfect shape. Several form fine objects as Standards, and may be trained to weep; others are invaluable as Perpetual Climbers for walls or pillars. A moderately rich soil is required, and pruning should be varied in proportion as the sort under treatment may be of vigorous or compact habit.

The W immediately following a name indicates varieties that are most suitable for walls.

TEA-SCENTED ROSES.

We have much pleasure in directing especial attention to our very superior stock of this deservedly esteemed class of Roses. We have erected several large houses for the express purpose of growing Tea Roses in pots, and can assure our customers that the plants we now offer are really specimens of successful cultivation.

We have established two distinct prices for Dwarf Tea Roses. The higher price will be charged for strong bushy plants in 24-size pots; these are half-specimens, suitable for growing for exhibition. Parties in ordering will oblige by naming the price at which they desire to be supplied with Roses in this class. When this is omitted we will invariably send plants at the higher price.

This class must be regarded as a sub-division of the preceding, having for its type our old favourite the "Rose odorata;" they are distinguished from all others by their peculiar and most delightful fragrance. Planted in conservatories, either kept as bushes or trained to trellises or columns, they produce a succession of bloom nearly throughout the year. Cultivated in pots they form beautiful objects. They are also very suitable for planting against dwarf walls and for beds, in which manner they require the same treatment as is recommended for China Roses.

In 48-pots, our selection for forcing, 21s. to 24s. per dozen.

N.B.—A few extra-size plants for Specimens in large pots of the above at 3s. 6d. each.

PERPETUAL ROSES FLOWERING from JUNE till NOVEMBER.

The following kinds of Hybrid Perpetual and Bourbou Roses are budded on fine young selected stocks expressly suited for potting, for forcing, or for greenhouse culture; they are also admirably adapted for forming groups in Rose Garden, and may be had at the price quoted for Dwarfs.

HYBRID PERPETUAL ROSES.

This invaluable and justly popular class has in a comparatively short time appeared and surprised us with the almost innumerable and very splendid varieties which it now contains; indeed, it is difficult to imagine anything more gorgeous than groups of these splendid Roses, enlivening the garden with a succession of their elegantly formed and deliciously fragrant flowers from early Summer until hoary Winter; nearly all the varieties form fine Standards, and as Dwarfs for pot culture they are quite unequalled, flowering with certainty when forced, and, being easily excited, they may be made to bloom much earlier than the Moss or other Roses. To the cultivator for exhibition they are of the greatest importance; several of the sorts are suitable to plant against pillars and walls, and nearly all grow and flower more freely budded on the Dog Rose than on their own roots. A soil moderately rich will ensure a fine display of bloom; close pruning is requisite.

 The new varieties of 1868 are printed in black letters.

ILE DE BOURBON ROSES.

The original Bourbon Rose is believed to be a hybrid, accidentally obtained from seed of the Common China Rose. It was introduced into Europe from the Isle of Bourbon, and so fertile has it proved in the production of seminal varieties, that the family now consists of three or four hundred sorts, many of which are now discarded from the collection: those retained must be regarded as the most valuable Autumn-flowering Roses; their fine foliage, compact habit, the profusion and long continuance of their bloom, render them quite indispensable to those who cultivate Roses in pots for exhibition; and budded on short stocks or on their own roots, they are well adapted for grouping; several are of sufficiently vigorous habit to plant against walls or pillars; nearly all form fine Standards, but those of compact habit should not be grown on stocks much exceeding three feet high, or they rarely form fine heads; when grown in beds on their own roots, a moderately rich light soil and dry situation should be selected; where these cannot be obtained, huddled plants are preferable; the vigorous kinds require moderate, and those of compact habit close pruning.

Nos. 1, 2, 3, 4, and 15 are suitable for Pots or Flower Beds ; Nos. 5, 6, 7, 13, and 14 for suspending to Rose and Fruit Trees, Shrubs, &c. No. 10 is YEATS'S NEW FLAT METALLIC PEG, length 4 inches, for Verbenas, layering Carnations, Picotees, &c., warranted not to rust. Price 1s. 3d. per Box of 100.

GALVANISED WIRE VERBENA PINS (No. 16), 9d. per Box of 1 gross, length 3 inches.

YEATS'S METALLIC INK, warranted to produce Indelible Black writing, 6d. and 1s. per Bottle.

LEAD WIRE, from No. 8 thick to No. 22 thin, from 1s. 3d. to 1s. 9d. per pound.

WOOD LABELS,

FOR POTS AND BORDERS.

3 inches in length, per 100, 6d. ; 4 inches, per 100, 9d. ; 6 inches, per 100, 1s.

SUSPENDING WOODEN LABELS, 4 inches, per 100, 1s. 3d. ; 6 inches, per 100, 1s. 9d.

E. WOLFF & SON'S Red, Blue, and Black Solid Ink Pencils, in Cedar.

These Pencils are excellent substitutes for Pen and Ink, as they possess indelibility, combined with the convenience of the lead Pencil. They are particularly recommended for office, warehouse, and general use, and will be found highly advantageous where despatch is necessary, and the writing required to be preserved for any length of time. They are also well adapted for writing on Garden Labels of all descriptions, the action of air, rain, &c., not having the slightest effect upon them.

Price 6d. each ; extra thick, 1s. each.

THE UTMOST LIBERALITY OBSERVED WHEN THE SELECTIONS ARE LEFT TO OURSELVES.

CARTER'S FERTILIZER.

Professor CHURCH, of the Royal Agricultural College, Cirencester, says, "I am much pleased with the thoroughly satisfactory character of Carter's Fertilizer."

Carter's Fertilizer is a manure specially prepared for the use of gardeners and amateurs, and its speciality over other manures is its nutritious and stimulating powers, in superinducing a quick, healthy, and vigorous growth, it is therefore specially recommended to be used in all forcing operations: it will also be found the best and cheapest Manure for the Flower Garden, Kitchen Garden, pot plants, Fruiting plants in pots, including Vines, Strawberries, Orchard House Trees, Cucumbers, &c., Fruit Trees, Vine Borders, and Strawberry Beds, and is highly beneficial if applied as a Liquid Manure for Lawns.

Directions for Use will accompany each Tin.

Report and Analysis of Carter's Fertilizer, by Professor CHURCH, M.A., F.C.S., Professor of Chemistry, Royal Agricultural College, Cirencester.

I have submitted to careful analysis the sample of Carter's Fertilizer forwarded to me a few days since. The Fertilizer satisfies all the conditions of an excellent Horticultural Manure. Its physical condition is first-rate, it is free from excessive moisture; it contains in large amount those ingredients of plant food which it is necessary to supply in a manure, and it *contains these ingredients in effective combination and in due proportion.*

The phosphates in the Fertilizer occur in their most available conditions, and constitute more than four-tenths of the weight of the Manure; while the nitrogenous matters are equivalent to nearly six per cent. of ammonia, an amount of this stimulating and valuable ingredient which it would probably not be safe to exceed.

I ought to add that the inert matters in Carter's Fertilizer are reduced to a minimum.

THE ANALYSIS.

Moisture	-	-	-	-	-	14.60	Alkaline Salts	-	-	-	-	-	11.15
*Organic matter and Water of Combination	-	-	-	-	-	26.27	Carbonates of Lime and Magnesia	-	-	-	-	-	0.43
Phosphates	-	-	-	-	-	43.90	Silica	-	-	-	-	-	3.65
													100.00

* Containing 4.77 per cent. of Nitrogen, equal to 5.79 per cent. of Ammonia.

Sold in Tins, containing 2 lbs. for 1s. 9d.; 7 lbs. for 4s. 6d.; and in Bags of Quarter cwt. for 15s.; Half cwt. for 25s.

VULCANISED RUBBER HOSE PIPES.

MADE OF INDIA RUBBER AND CANVAS.

Strongly recommended for gardening purposes, as they do not require drying after use, and will not rot or leak.

All Hose made in 60 feet lengths.

60 feet $\frac{1}{2}$ inch, 1 ply, with fittings complete, 25s.

Internal Diameter.		Per foot—s. d.	Internal Diameter.		Per foot—s. d.

Unions, for joining different lengths of Hose, $\frac{1}{2}$ inch, 1s. 6d.; $\frac{3}{4}$ inch, 2s.; 1 inch, 2s. 6d.

Straight Branch Pipes, with Warner's Registered Spreader and Stop-cock, for $\frac{1}{2}$ inch Hose, 8s.

" " " with Rose and Stop-cock, $\frac{1}{2}$ inch, 5s. 6d.; $\frac{3}{4}$ inch, 8s.

1 ply is sufficiently strong for horticultural purposes. 2 ply for agricultural use, where greater strength is required.

WALLACE'S ELASTIC LIGATURE.

An adaptation of Vulcanite Rubber Cloth to supersede the use of woollen shreds for nailing Roses, Fruit Trees, &c. It possesses the following invaluable advantages over the materials previously used:—*Durability*, as it does not decay; *Cleanliness*, as it does not harbour insects, and the ova of insects will not live in it; *Elasticity*, which prevents the cutting into the wood so often found in common shreds; and *Cheapness*.

Sold in Boxes, each containing 100, of the following sizes and prices:—

No. 1, $2\frac{1}{2}$ inches \times $\frac{1}{2}$ in., 1s. 9d.

No. 3, 4 inches \times $\frac{3}{4}$ in., 3s. 6d.

No. 2, 3 inches \times $\frac{1}{2}$ in., 2s. 6d.

No. 4, 6 inches \times 1 in., 4s. 6d.

PATENT OUT-DOOR FUMIGATOR, for Standard Roses and other Plants.

This useful Fumigator has been projected by the Patentees of Tobacco Tissue for the purpose of consuming Fumigating Materials generally, and to supply a want long felt—that is, a ready means of getting rid of Green Fly and all Insects which infect Roses and other Out-door Plants. It is very simple in construction, and can readily be removed from one Plant to another, and easily adjusted to the height required. Price, 17s. 6d. each.

**PARMENTER'S PATENT PREPARATION FOR THE DESTRUCTION OF
MEALY BUG, RED SPIDER, THRIP, SCALE, and other INSECTS, also MILDEW on
VINES and FRUIT TREES.**

This Mixture must be applied in the same manner as paint ; when the Vines or Fruit Trees are considerably affected, they should be painted over with a brush, if this is done effectually, one application will be found quite sufficient. The usual time for applying the composition is when the Vines or Trees are in a dormant state—say about January ; and should there be any appearance of a recurrence of the Mildew in early Spring, a good syringing with water and the Mixture (dissolved therein) will be found to remove it instantly ; half a pint of the Mixture to two gallons of water is a sufficient proportion. The above will be found the most effectual remedy ever offered to the public, being instantaneous in its effects and perfectly innocuous in its application.

In bottles, 1s., 2s., and 5s. each.

GISHURST COMPOUND, in boxes, 1s. and 3s. each.**CLARKE'S INSECT-DESTROYING COMPOUND.**

A 2s. Box will make Six Gallons ; a 4s. Box Twelve Gallons. Directions for use with each Box. Also, a Solution prepared expressly for Mealy Bug, causing instant death to all it comes in contact with. In bottles, with directions for use, 2s. and 4s. each.

BOSTON'S NE PLUS ULTRA,

REMEDY FOR THE ENTIRE ERADICATION OF THE GREATEST PESTS IN PLANT HOUSES, VIZ.,

MEALY BUG, BROWN SCALE, AND WHITE SCALE,*For which the previously used remedies have proved so ineffectual.*

Tobacco fumigation will kill Green Fly and Black Thrip ; Sulphur will destroy White Thrip and Red Spider ; but nothing hitherto offered has been effectual in keeping down Mealy Bug, Brown and White Scale, excepting constant washing, entailing an incessant amount of labour. The above remedy not only kills all the insects visible to the naked eye, but also the minute ova which can only be seen by the aid of a powerful lens or a microscope.

*Price per Bottle, with brush and instructions, 3s. 6d.**Larger size ditto, ditto ditto 5s.**Extra large, for very extensive places, 10s. 6d.*

WARNER'S CRYSTAL PALACE FIRE ENGINE OR PORTABLE FORCE PUMP.

With this compact, portable, and generally useful Engine, one man will throw from 15 to 18 gallons of water per minute to a height of 50 feet. All its working parts are brass, the barrow of wrought iron; easy access to the valves is gained, and the workmanship throughout is substantial. Not only will it be found most useful in cases of fire, wherever a supply of water can be obtained, but also for watering Lawns or Fruit Trees.

Price on Barrow, with Branch Pipe, Spreader, Unions, and Suction Rose.... £6 0 0

1½-in. 2-ply Rubber Suction Pipe, per foot, 2s. 2d. 1½-in. 2-ply Rubber Delivery Hose, per foot, 1s. 4d.

Messrs. WARNER & SONS,

CRYSTAL PALACE, SYDENHAM, March 2, 1867.

"Gentlemen,—I feel great pleasure in stating that I was present at a trial of your small Crystal Palace Fire Engine, and was much pleased with its efficiency and simplicity.

"The pump throws out a steady jet of water to a height of 50 feet with very little labour. The pump we have is well made, very simple in its parts, and not likely, I think, to get out of order. The advantage of this pump is its being very portable. Besides being a good Fire Engine, it will make an excellent Garden Engine.

"I remain, Gentlemen, yours obediently,

"EDWIN ROSE, Engineer to the Crystal Palace Company."

WE HAVE AN IMMENSE STOCK OF CHOICE VINES.

THE PATENT TWO-PART GARDEN ROLLER

Has the following advantages: It will work round sharp curves and angles, and turn in its own length without disfiguring either grass or gravel. Each of the *two parts* has the arms cast with it in a solid piece, and they are made true at the junction by machinery, the bushes being bored at the same time. The arms are recessed, so as to allow space for a protecting collar with a flange, by which grit is kept from the bushes. The balance-weight has similar flanges to protect the axle from any grit that may find its way through the junction of the two roller parts. The handle is of tubular iron, on a plan adopted with much success by the patentee in his horse shafts for agricultural ma-

chines, &c., and the iron work and general appearance is plain and good. They are japanned, varnished, and finished in a very superior manner.

Although the Patent Garden Rollers are generally heavier than those of the ordinary kind, they are used with less labour, especially in curved or winding walks and borders, and the work is better done.

CARTER'S ROYAL MIXTURES OF GRASS SEEDS,

For Pastures, Lawns, Cricket Grounds, &c., &c., as supplied to

HER MOST GRACIOUS MAJESTY THE QUEEN,
HIS ROYAL HIGHNESS THE PRINCE OF WALES,
Her Royal Highness the Crown PRINCESS OF PRUSSIA,
His Imperial Majesty the EMPEROR OF THE FRENCH,
The Government of the United States,

For Tables of Grass-seed Mixtures suited to the various soils, see next page.

CLEAN SEEDS.

The necessity of procuring grass seeds free from weeds is a most important condition to be considered by purchasers, as much of the disappointment occasioned by dirty and rough crops is attributable to a neglect of this point when buying apparently cheap samples.

Our stocks are selected with the greatest care, and will be found of purest quality.

From M. B. BILLET, Chief Superintendent of the Gardens of H. I. M. Napoleon III. (Translation.)

The grass which we have laid down with your seeds has come up well, and is magnificent.

CARTER'S GRASS SEEDS FOR PERMANENT PASTURES.

In the preparation of mixture for the formation of Permanent Pastures, J. C. & Co. specially adapt them to the particular soil required to be laid down to grass, and thus avoid the disappointment often occasioned where seeds are sown without a due consideration of the nature of the soil.

J. C. & Co. having had a lengthened experience, can confidently recommend their Mixtures as detailed on the next page.

TESTIMONIALS.

From J. BROMWICH, Esq.,
Rugby.

The grass seeds I had from you were very good indeed; a more beautiful crop could not be found.

From the Right Honorable
LADY CARBERRY, Castle
Freke.

Lady Carberry wishes to tell Messrs. Carter nothing can be better than the meadow land laid down with their Grass and Clover seeds last season.

From E. LLOYD, Esq.,
Noyadd.

I am very much pleased with my crop of Carter's Superfine Italian Rye Grass and Trifolium incarnatum produced from your seed last autumn; it was capital keep for my stable horses, and lasted a long time.

Hints on the formation of New or Improvement of Old Lawns.

1.—The soil should be in good tilth, and care taken that the seed is not buried too deep, as from that cause the very finest grasses would perish. A quarter of an inch to half an inch may be accepted as the maximum and minimum to be remembered.

2.—After sowing the soil should be well rolled, and constant mowing and rolling be adopted when the grass seeds germinate. Weeds of every description should be instantly removed on making their appearance above ground, and the spaces occupied by them re-sown with fine grass seeds.

3.—When making a new Lawn it is highly important to ascertain whether the land is insufficiently or excessively drained, as in either case complete success is impossible.

4.—Care should be taken when surface-dressing with fine soil (as is generally necessary) that it be as free from weeds as possible. The same precautions are desirable where the seed is intended to be sown on the native soil. By this means the disappointment of weedy Lawns may be materially avoided.

From Mr. S. J. JOWNING,
Petersfield.

Please send me half bush. Carter's finest Lawn Grass, the same as last year. It was first-class.

The following Tables contain the most desirable Grasses and Clovers to produce hay of first-rate quality, and an excellent horbage. J. C. & Co. hold very fine stocks of Grass Seeds, and strongly advise early orders. The mixtures are kept in reserve, and can be supplied on the shortest notice.

Special preparations will be made for peculiar soils not described below.

CARTER'S SUPERFINE ITALIAN RYE GRASS,

FOR SOWING ALONE, OR WITH OTHER CROPS.

J. C. & Co. desire to call especial attention to the fine quality of their Superfine Italian Rye Grass, supplied in large quantities to the leading Sewage Farms in the United Kingdom, with surprising results. *At the Lodge Farm, Barking, it is computed that sixty tons (or more) per acre will be the produce during twelve months, or an average (in six cuttings) of ten tons each cutting. Sow 4 bushels per acre. Price 7s. 6d. per bushel.*

BROMUS SCHRODERI, FOR PRESENT SOWING.

J. C. & Co. have constantly urged the value of this plant to Agriculturists, and are gratified to learn from many correspondents of their successful experiments.

Bromus Schroderi is now recommended to be sown with *Trifolium* or *Tares*, with advantage to both crops. The *Bromus*, from its robust habit of growth, is well adapted to support the more slender *Trifolium* or *Vetch*, whilst the protection afforded the *Bromus* by the undergrowth of *Trifolium* during the winter will be of material advantage, and still further encourage the growth of the *Bromus* throughout the winter.

Bromus Schroderi is a valuable forage plant, and is greedily consumed by all kinds of stock.

Sow 2 to 3 bushels per acre (if alone).

Price 14s. per bushel.

CARTER'S "LORD'S" MIXTURE OF FINE GRASS SEEDS FOR CRICKET GROUNDS.

18s. per bushel. Sow 3 bushels per acre in August or September.

Look to your Grass Lands.

CARTER'S RENOVATING MIXTURE.

Should now be sown on meadows that have suffered from the past dry summer. The Mixture includes the most desirable Grasses and Clovers for hay crop, and succeeding green feeding, and will soon restore a permanent pasture. Sow 8 to 12 lbs. per acre.

Price 9d. per lb.

80s. per cwt.

CARTER'S "ROYAL MIXTURE" OF FINE GRASS SEEDS FOR LAWNS, &c., contains

	lbs. per acre.
<i>Cynosurus cristatus</i> (Crested Dogtail) ..	14
<i>Trisetum flavescens</i> (Golden Bristle Grass) ..	9

PYRETHRUM (Golden Feather), a dwarf golden-leaved bedding plant, which since its recent introduction has been universally admired, being so well adapted for all purposes of bedding. Per packet, 1s.

PRIMULA FIMBRIATA (new scarlet). This is a decided novelty, being of a deep scarlet colour, and cannot fail to be much admired wherever grown. Per packet, 2s. 6d.

PANSY, CLIVEDEN, blue, per packet, 1s. } These universally admired early-flowering plants have of late
 " " purple " 1s. } years been very extensively grown, and for effect, when grown in
 " " yellow " 1s. } masses or used as edgings for beds, cannot be surpassed.

CALCEOLARIA, CINERARIA, AND FRINGED PRIMULA.

Our **CALCEOLARIA** and **CINERARIA** Seeds are saved from the finest named varieties, and cannot be surpassed, if equalled: the **PRIMULA** is from the finest strain in cultivation, large in size, rich in colour, finely fringed, and of good substance. In separate colours of white, rose, and dark carmine.
